

# Peak District

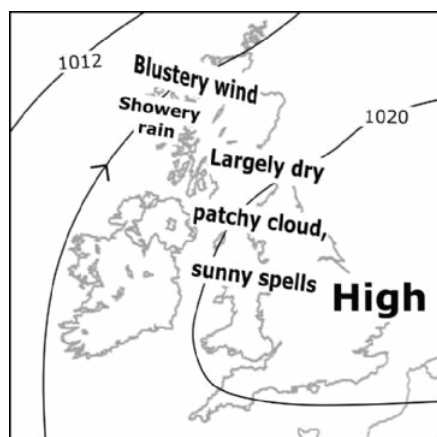

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

**Big Shakeout Festival presented by Alpkit - 25-27 September 2026**

**A small festival BIG on adventure - Great Longstone, Peak District**

## General Summary for Monday, 28 September, 2026

### British Mountain Summary:

#### Based on forecast chart for noon 28 September, 2026

Breezy over Scottish mountains, windier further northwest, feeling chilly. Showery for western Lochaber, Mull and around Skye, tending to fade during afternoon. Largely dry elsewhere, varied cloud over hills in morning, lifting and breaking above many tops with some sunshine. Lighter winds for England & Wales.

### Headline for Peak District

Light wind. Sunshine and broken cloud, hills clear.

## Detailed Forecast for Monday, 28 September, 2026

|                                                   |                                                                                                                                                                      |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | West-southwesterly 10 to 15mph, dropping during morning to variable 5-10mph until late in day. Then into evening southeasterly and rising into night to gusty 25mph. |
| <b>Effect of wind on you?</b>                     | Small most or all daylight.                                                                                                                                          |
| <b>How wet?</b><br>(Precipitation and its impact) | Rain not expected                                                                                                                                                    |
| <b>Cloud on the hills?</b>                        | <b>Largely clear</b><br>Patchy mist around some valleys from dawn, may drift briefly onto some lower hill slopes, but all dispersing.                                |
| <b>Chance of cloud free summits?</b>              | <b>Above 90%</b>                                                                                                                                                     |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Patchwork of cloud and sun, some thin high cloud in the morning.<br>Visibility excellent.                                                                            |
| <b>Temperature (at 600m)</b>                      | 6C rising to 12C.                                                                                                                                                    |
| <b>And in the valleys</b>                         | 5 to 7C from dawn, rising to 18C afternoon.                                                                                                                          |

**All mountain areas of Britain from Tuesday, 29 September, 2026**

Strong southeasterly winds by Tuesday, widely gales on mountains with turbulent downslope gusts toward the west; some rain developing from the south during the day, becoming heavy later - a band of rain moves northeast into early Wednesday, leaving blustery south-southwesterlies into Wednesday and Thursday, showery in the west. Some occasional rain further ahead, but more often looking drier as higher pressure tends to expand further north during early October. Mostly mild temperatures, some cooler nights develop.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
