General Summary for Saturday, 14 November, 2026

British Mountain Summary:
Based on forecast chart for noon 14 November, 2026

Windy across higher areas, particularly so those near the north Irish Sea and Scottish Highlands (where widespread upland gales). Drizzly rain will affect some western mountains, but otherwise extensively dry. Much mountain terrain at least partly frozen, particularly morning.

Headline for Peak District

Windy; sunshine. Terrain partly frozen.

Detailed Forecast for Saturday, 14 November, 2026

How windy? (On the summits)	Southerly, increasing markedly with height to 25mph or locally 30mph on highest moorland.
Effect of wind on you?	**Higher up considerable wind chill and arduous walking. Balance sometimes a struggle.**
How wet? (Precipitation and its impact)	**Rain unlikely**
Cloud on the hills?	**Very little** The hills extensively cloud free, although patches here and there on higher slopes, most likely morning.
Chance of cloud free summits?	**80%**
Sunshine? Air clarity (below cloud)	Sunshine most or all day. visibility very good or excellent after the risk of fog some valleys morning.
Temperature (at 600m)	1 rising to 3C. Will feel as cold as minus 6C directly in the wind.
And in the valleys	Widely frosty morning; by early afternoon the temperature between 5 and 8C.

Peak District - Looking Ahead

	Sunday 15 November	Monday 16 November
How windy? (On the summits)	South to southwesterly 30 to perhaps 40 or 45mph for a few hours.	West to northwesterly; dropping from 30-35mph at dawn to 20-25mph by dusk.
Effect of wind on you?	**Temporarily small, but zones where wind chill significant and walking difficult - these challenging conditions could set in abruptly.**	**Considerable wind chill and buffeting from lower slopes up in gusty winds, at least in morning.**
How wet? (Precipitation and its impact)	**Intermittent rain** Areas of rain will circulate within general low pressure.	**Snow or hail frequently; risk thunder** Squally snow and hail showers some heavy; risk lightning morning. Rain below 300m.
Cloud on the hills?	**Fog very likely across the mountains all day** Fog in some areas from lower slopes up, and few breaks above 600m.	**Extensive on higher tops.** Fog frequent or perhaps during morning persistent above 500 or 600m, and patches below 350m near showers. In afternoon, most cloud probably just above the summits.
Chance of cloud free summits?	**20%**	**20% rising to 60%**
Sunshine? Air clarity (below cloud)	Sunshine rare if any. Regions of very poor visibility; sometimes very good.	Occasional sunshine. Very poor visibility in snow, but intermittently good.
Temperature (at 600m)	4C	-1C. Will feel as cold as minus 10C directly in the wind.
And in the valleys	Around 7C.	Will reach around 6C, but dropping to around 3C near showers.

Planning Outlook

All mountain areas of Britain from Sunday, 15 November, 2026

On Sunday, uncertainty in forecast detail remains within a complicated area of low pressure.
Beyond, cold with higher terrain frequently or almost permanently frozen most or perhaps all next week. Wales, and perhaps N England, will see one or two incursions of much warmer air together with areas of persistent rain and snow. Some higher areas may have a considerable snow. Overall, low precipitation across Scotland, but marked exceptions: here too, where the frequently northerly wind rises over mountains (with the sea directly to the north), accumulations of snow may well be considerable.

Forecast issued at 14:12 on Friday, 13 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
