General Summary for Sunday, 22 November, 2026

British Mountain Summary:
Based on forecast chart for noon 22 November, 2026

Windy across upland Britain, gales some higher areas, particularly Snowdonia. Extensively dry and cold and much terrain will be at least partially frozen. However, cloud progressively thicker southward across Wales, with an almost stationary area of rain South Wales.

Headline for Peak District

Upland wind near gale. Chance light shower.

Detailed Forecast for Sunday, 22 November, 2026

How windy? (On the summits)	Easterly 30 to perhaps 35mph, locally very gusty, sometimes penetrating tn lower slopes.
Effect of wind on you?	**Marked wind chill and sometimes abruptly gusty winds will make balance difficult in places; sometimes on lower slopes.**
How wet? (Precipitation and its impact)	**Precipitation very unlikely** Risk isolated very light showers.
Cloud on the hills?	**Little if any** Threat patches highest areas at times.
Chance of cloud free summits?	**Greater than 90%**
Sunshine? Air clarity (below cloud)	Bright sunshine, perhaps extensive. Visibility very good or excellent.
Temperature (at 600m)	3C. Will feel as cold as minus 6C directly in the wind.
And in the valleys	Terrain partly frozen lower slopes, particularly morning out of the sun. Will reach around 5C briefly in afternoon.

Peak District - Looking Ahead

	Monday 23 November	Tuesday 24 November
How windy? (On the summits)	Southeasterly 15mph	South to southeasterly, strengthening quickly with height a very gusty 40-50mph. Ferocious gusts; some reaching valleys.
Effect of wind on you?	**Small.**	**Significant wind chill and very difficult walking where exposed. Gusts may well knock you over - even on some lower slopes.**
How wet? (Precipitation and its impact)	**Precipitation very unlikely**	**Rain and perhaps snow extending east** An area of rain will extend eastwards, though timing uncertain. Will fall as snow above about 500 or 600m.
Cloud on the hills?	**May form toward east and south, possibly extensively.** Confidence low: Moderate risk of extensive ver low cloud, base from just above valleys, shrouding much of region, particularly southern and eastern areas. Some higher areas may be above the fog.	**Forming widely on higher areas in precipitation.** Cloud likely to shroud higher areas most or all day, in rain, lowering to between 250 and 400m.
Chance of cloud free summits?	**50%**	**30%**
Sunshine? Air clarity (below cloud)	Lower areas, particularly south and east may be dull and foggy. Periods of sunshine may come through elsewhere, though perhaps hazy.	Perhaps a little sun, most likely morning before cloud thickens. Hazy, and visibility poor in precipitation.
Temperature (at 600m)	3C.	0C. Will feel as cold as minus 12C in the wind.
And in the valleys	Some lower areas partly frozen in morning after a frost.Temperatures rising to 4 to 7C.	Will reach around 6C.

Planning Outlook

All mountain areas of Britain from Monday, 23 November, 2026

Colder than normal most mountain areas throughout next week. Precipitation and temporarily warmer conditions will occasionally penetrate across most southern and western mountains, but particularly later in the week, freezing level across Britain may drop to a few hundred metres - with much higher terrain persistently frozen. Most considerable snowfall is likely over the SE Highlands and perhaps Scottish Border hills.

Forecast issued at 12:20 on Saturday, 21 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
