General Summary for Thursday, 5 September, 2024

British Mountain Summary:

Based on forecast chart for noon 5 September, 2024

Low cloud will bring persistent fog to most mountains, toward the east, many lower slopes shrouded. A few showers, mainly England will drift inland. Separately patches of heavier rain will affect South Wales. Very gusty strong winds will affect many mountain areas south from southern Scotlands.

Headline for Eryri / Snowdonia National Park

Very gusty wind. Sheet low cloud covering most mountains.

Detailed Forecast for Thursday, 5 September, 2024

How windy? (On the summits)	Northeasterly, a very gusty 30 to 45mph, perhaps 50mph evening.
Effect of wind on you?	Considerable buffeting both on higher areas and some lower slopes and valleys - increasingly ferocious gusts could blow you over.
How wet? (Precipitation and its impact)	Threat bursts of heavy rain Overall little or particularly Snowdon range no rain (except for fine drizzle where in cloud). But most likely afternoon mid Wales, threat one or two bursts of rain, possibly heavy.
Cloud on the hills?	Extensive; frequently very low cloud base east Wales Extensive fog across the hills all day. The cloud will sometimes break to higher slopes (above 750m) westernmost hills, but often shroud lower slopes elsewhere.
Chance of cloud free summits?	20%
Sunshine? Air clarity (below cloud)	Mostly cloudy, and in east Wales dull and misty. Excellent visibility western hills.
How Cold? (at 900m)	9C
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Friday 6 September	Saturday 7 September
How windy? (On the summits) Effect of wind on you?	East or northeasterly, speeds varied, typically 35mph, but may reach a very gusty 55mph in some areas. Likely to result in considerable buffeting in some areas, and near and west of some higher ridges, sudden gusts may knock you over.	Easterly 10 to 15mph. Mostly negligible
How wet? (Precipitation and its impact)	Little or more likely no rain Areas of fine drizzle, mainly morning easternmost Wales. Small risk bursts of heavier rain, most likely mid Wales.	Risk showery rain occasionally Risk of one or two bursts of rain, most likely mid Wales, where possibly heavy
Cloud on the hills? Chance of cloud free summits?	Extensive east Wales, but mostly or all clearing, initially west Wales Blanket of low cloud, base in some areas just above valleys may well cover all but westernmost areas from dawn. The top of the cloud around 650m (at an inversion). By afternoon, most areas free of cloud, but patches could linger above 400m east Wales. 40% rising to 80%	Little if any - although fog some valleys morning The mountains cloud free all day. But fog in some valleys for a few hours from dawn. 70%
Sunshine? Air clarity (below cloud)	Bright sunshine increasingly coming through higher areas, and visibility becoming excellent higher up, although in east Wales, some areas dull and misty most, possibly all day.	Some sunshine, but cloud will come and go. Superb visibility but mist or fog some valleys after dawn.
How Cold? (at 900m) Freezing Level	16 to 19C - very warm. (Colder some lower slopes morning). Above the summits	13 rising to 16C. Above the summits.

Planning Outlook

All mountain areas of Britain from Friday, 6 September, 2024

Warm and frequently dry on most mountains until Sunday. It will then turn progressively colder as easterly winds back toward the north. For most areas rainfall will be low until well into next week. Nevertheless, some patches of rain (heavy in places) mainly England and particularly Wales until Sunday. It may then begin to turn wetter across the Scottish Highlands.
