General Summary for Sunday, 1 June, 2025

British Mountain Summary:

Based on forecast chart for noon 1 June, 2025

Low pressure brings a cold and blustery westerly airflow. Area of rain southern Highlands southwards, will clear in morning, brighter conditions following. Showers transferring inland from west coast, concentrated NW Highlands and later NE Scotland, where risk of thunder. Turning mostly dry later in the day for England and Wales.

Headline for Eryri / Snowdonia National Park

Blustery and chilly for June. Patchy rain or drizzle with hill fog. Improving later.

Detailed Forecast for Sunday, 1 June, 2025

How windy? (On the summits)	Westerly 35 to 40mph before midday, easing to 20 to 25mph; strongest in north.
Effect of wind on you?	Feeling very blustery and cold on high ground and in passes where wind is squeezed. Will affect your balance. Significant wind chill. Easing later.
How wet? (Precipitation and its impact)	Drizzly showers becoming widespread for a time. A largely dry day inland. Increasingly pockets of drizzle and areas of shower rain developing as a trough moves in, most widely on mountains near Cardigan Bay from Cadair Idris to western Eryri/Snowdonia NP. Mid afternoon onwards, becoming drier as drizzly showers ease off. Fine evening follows.
Cloud on the hills? Chance of cloud free summits?	Extensive at first; all or nearly all clearing through day Hill fog extensive through morning, lowest bases toward west coast, rising to 600-750m east Wales. Will improve, probably markedly through middle of day, following showery trough, as cloud base lifts to or above higher tops. 30% at first, rising to 80% by mid afternoon
Sunshine? Air clarity (below cloud)	Dull for several hours, but increasingly sunshine breaking through in afternoon. Good visibility inland, away from precipitation, hazy out to sea.
How Cold? (at 900m) Freezing Level	7C. Feeling as cold as -4C in the morning. Above the summits.

All mountain areas of Britain from Monday, 2 June, 2025

Atlantic low pressure systems will continue to dominate and bring a sustained period of westerly winds for the next 7 to 10 days. High rainfall western mountains, with periods of strong to gale force westerly winds bringing significant chill factor. Best of the drier and brighter weather for eastern ranges. Freezing level at times down to 1200-1400m in Scotland, bringing occasional snow to the highest Munro tops.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
