General Summary for Sunday, 6 July, 2025

British Mountain Summary:

Based on forecast chart for noon 6 July, 2025

Cloud on higher hills with patchy rain for many areas in the morning. Later, a band of showers forms from central highlands southward into England, drifting down the Pennines; showers will give heavy bursts with a risk of few lightning flashes southern Scotland. Damp in Wales early, gradually improving.

Headline for Eryri / Snowdonia National Park

Early rain into drizzly showers, cloud base tending to lift

Detailed Forecast for Sunday, 6 July, 2025

How windy? (On the summits)	West to northwesterly 25-30mph; westerly early in the day. Increasing through the afternoon, winds approaching 35-40mph over tops into nighttime.
Effect of wind on you?	Walking impeded most of the day, becoming strenuous with buffeting gusts challenging balance on exposed ridges into evening. Feeling cool.
How wet? (Precipitation and its impact)	Showers, at times persistent Often raining early with heavy spots here and there, then drizzly rain much of the day on northwest slopes facing Anglesey. Generally easing through the day, though at times drizzly and damp on high slopes.
Cloud on the hills?	Fairly extensive, some improvement; best breaks southeast Fairly extensive over high terrain much of the day. North and west slopes nearest Anglesey regularly shrouded to middle slopes. Bases tend to rise, tops southeast of Glyder Fawr/Snowdon increasingly clear.
Chance of cloud free summits?	20%, becoming 70% southeast
Sunshine? Air clarity (below cloud)	Greatest chance of glimpses southeast of high tops. Good visibility out of cloud, often poor in rain on north/west slopes.
How Cold? (at 900m)	8 or 9C, little change through the day. Feeling at/near freezing in the wind, notably into nighttime.
Freezing Level	Above the summits

All mountain areas of Britain from Monday, 7 July, 2025

A generally settled start to the week as high pressure will become dominant across England and Wales Monday and Tuesday. Expect substantially dry conditions here through much of the week with good periods of sunshine. In Scotland, low pressure to the north will facilitate a consistent west-southwesterly wind, driving several weak fronts onto northwestern coasts as the week goes - often cloudy here with periods of rain, tending to be drier with sunny spells in east Scotland. Temperatures will be near average. Some uncertainty about next weekend - fronts are likely to continue drifting towards Scotland and north England, though possibly interrupted by dry and warm air from the continent.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
