General Summary for Friday, 29 August, 2025

British Mountain Summary:

Based on forecast chart for noon 29 August, 2025

Rain frequent or persistent for western Scotland most of the day, some slow-moving heavy bursts, these extending increasingly eastwards over the Highlands. Clusters of showery rain over western England and Wales will drift eastwards during the day on fresh and gusty winds.

Headline for Eryri / Snowdonia National Park

Showery spells, brisk winds.

Detailed Forecast for Friday, 29 August, 2025

How windy? (On the summits)	Westerly 20-30mph, occasional stronger gusts over high terrain in showers.
Effect of wind on you?	Walking impeded at times; balance challenged in strong gusts over tops.
How wet? (Precipitation and its impact)	Showers Frequent or persistent rain western Snowdonia and mid-Wales in morning, breaking into a scattering of showers passing eastward, some heavy bursts, chance isolated thunder.
Cloud on the hills?	Tending to improve though variable From dawn, fairly extensive from middle slopes up west of highest tops, variable banks to lower slopes. More broken and higher bases forming, best toward east, but cloud often capping western tops above 800m.
Chance of cloud free summits?	20% rising to 60%
Sunshine? Air clarity (below cloud)	Sunshine in and out east of high tops with very good visibility; little or no sunshine west/coastal areas where visibility often poor.
How Cold? (at 900m)	8 to 10C. Feeling near/below freezing in the wind on tops.
Freezing Level	Above the summits

All mountain areas of Britain from Saturday, 30 August, 2025

An unsettled weekend ahead driven by low pressure to the west/north of Scotland. Brisk westerlies will drive showery rain onto western mountains, at times drifting eastwards. Some local thundery downpours may arise. Saturday in particular will be very windy with widespread risk of gales and heavy rain setting in from the southwest. Sunny periods will arise between weather features, greatest chance in eastern areas later in the weekend and early next week. Next week stays mixed with low pressure in charge, frequent rain or showers continuing. Some improvement later in the week as pressure tends to rise.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
