General Summary for Tuesday, 16 September, 2025

British Mountain Summary:

Based on forecast chart for noon 16 September, 2025

Strong upland winds across the UK in the morning will ease from the west into the afternoon. Frequent showers in west-coastal regions; more scattered inland with the Peak District and Cairngorms National Parks becoming or staying largely dry. Extensive cloud on most high ground. Temperatures feeling cool.

Headline for Eryri / Snowdonia National Park

Upland gales, easing. Showery

Detailed Forecast for Tuesday, 16 September, 2025

How windy? (On the summits)	Westerly 35 to 45mph at first, strongest over the tops, easing down into the afternoon to 25mph and later 20mph near the west coast.
Effect of wind on you?	Arduous conditions through morning, perhaps difficult for a time, significant wind chill. Easing into the afternoon.
How wet? (Precipitation and its impact)	Scattered showers A scattering of showers coming and going for several hours, tending to ease off for a drier afternoon. More rain arriving evening into night from the southwest.
Cloud on the hills?	Frequent on upper slopes, lifting to tops. Frequent cloud covering upper slopes of the hills from dawn. Gradual rise of the bases to tops, where there will be intermittent clearing in the afternoon.
Chance of cloud free summits?	20% lifting to 60%
Sunshine? Air clarity (below cloud)	A little hazy patches of sun, through an increasing veil of high cloud. Becoming overcast. Visibility good or very good.
How Cold? (at 900m)	7C. Feeling below freezing in the wind, near -5C high tops.
Freezing Level	Above the summits

	Wednesday 17 September	Thursday 18 September
How windy? (On the summits)	Still some uncertainty: Southwesterly 50mph+ in the morning, easing slightly to 35 to 40mph by midday.	Forecast details very uncertain. Southwesterly 40 to 50mph, risk sustained 60mph+. Powerful turbulent gusts.
Effect of wind on you?	Arduous conditions, affecting ease of walking and balance on ridges for much of the day. Conditions more difficult in the morning.	Difficult walking conditions will make progress challenging. Very powerful gusts, especially in passes, may easily blow you over. Marked wind chill.
How wet? (Precipitation and its impact)	Persistent rain morning, may fade Very wet underfoot and streams in spate after overnight rain. Rain fairly persistent, possibly heavy for a few hours in the morning. Chance of constant rain continuing, but likely to ease to drizzle or fade completely in the	Probably persistent, heavy west Persistent rain or heavy rain likely, particularly western areas. Chance of remaining substantially dry toward Berwyn mountains, possibly drier elsewhere for a time as position of front is uncertain at this stage.
Cloud on the hills?	Fairly extensive Cloud likely to cover higher slopes most or all day, at times blanketing hills to mid-slopes during rain. Chance of lifting a little.	Extensive where raining Extensive cloud down to lower west-coastal slopes where in rain. Regions that remain dry will likely have higher cloud base, above many eastern hills.
Chance of cloud free summits?	20%	20%
Sunshine? Air clarity (below cloud)	Generally overcast, varied layers of cloud. Visibility reduced by rain, at times poor; some possible improvement if rain eases.	Little or no sunshine in many places. Hazy, poor visibility in rain; locally better visibility toward east and north of the A5.
How Cold? (at 900m)	8 to 10C. Feeling sub-zero in the wind, nearer -5C in stronger speeds.	11C. Feeling around or below 0C in the wind.
Freezing Level	Above the summits	Well above the summits.

Planning Outlook

All mountain areas of Britain from Wednesday, 17 September, 2025

An ongoing unsettled outlook generally dominated by low pressure. Extensive rain and gales into midweek, likely wettest on west-coastal regions. Areas of rain and showers frequently in the forecast later in the week. Temperatures near-average, but feeling cool when exposed to wind. A chillier northwesterly may emerge by next weekend, briefly dropping near freezing on highest Scottish tops. Indications then favour higher pressure at least briefly expanding northwards early next week for some drier days, but unlikely to settle down for long.

Forecast issued at 16:31 on Monday, 15 September, 2025
