General Summary for Sunday, 9 November, 2025

British Mountain Summary:

Based on forecast chart for noon 9 November, 2025

A swathe of rain advances eastwards across all regions during the day, heaviest over south-facing hill groups, patchier northwards across the Highlands, breaking up with time in the west, leaving a few showers, rising cloud bases. Windy, up to gale force high tops, most sustained in Wales.

Headline for Eryri / Snowdonia National Park

Upland gales. Heavy rain, fading only later.

Detailed Forecast for Sunday, 9 November, 2025

How windy? (On the summits)	South to southwesterly 35-45mph passes west to east through the day, risk 50mph over tops. May ease slightly from the west later.
Effect of wind on you?	Difficult conditions with considerable buffeting and wind chill. May ease later though remaining strenuous.
How wet? (Precipitation and its impact)	Raining most of the day Frequent rain soon arrives onto western slopes, spreading east and becoming widely persistent for several hours. Heaviest rain on slopes facing the Lleyn peninsula. Breaking up into showery rain during afternoon.
Cloud on the hills?	Extensive Blanket cloud most of day on slopes facing Cardigan Bay and the Lleyn peninsula. Higher bases towards Carneddau and east-Wales, though largely extensive above 600-700m. Later afternoon, some rise of base.
Chance of cloud free summits?	Less than 10%
Sunshine? Air clarity (below cloud)	A few bright periods on northern slopes, elsewhere foggy and dull.
How Cold? (at 900m)	7 or 8C. Feeling like -5C in direct wind.
Freezing Level	Above the summits

All mountain areas of Britain from Monday, 10 November, 2025

A cloudy and wet week ahead as several low pressure cores draw frontal systems across the British Isles. Rain at times extensive and heavy, streams in spate with a risk of flooding, primarily western mountains. Winds start fairly light but soon increase with gales becoming widespread by Tuesday, which may persist for several days. Temperatures remain mild until later in the week when cold air begins pushing into northern Scotland - timing and extent of the arrival of cold air remains uncertain but high terrain of Scotland and possibly northern England may start to see more snow around or after next weekend.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
