General Summary for Friday, 28 November, 2025

British Mountain Summary:

Based on forecast chart for noon 28 November, 2025

Stormy conditions over Scottish mountains, easing only toward dusk; frequent or persistent rain and hill snow, heaviest western mountains. Severe gales high tops England & Wales, squally stormy gusts for a time with heavy bursts of rain. Risk of hail and isolated thunder, mainly western areas.

Headline for Eryri / Snowdonia National Park

Gales, severe at times tops. Showery bursts with hail.

Detailed Forecast for Friday, 28 November, 2025

How windy? (On the summits)	Southwesterly 40 to 55mph, sudden powerful squalls, gusts over 60mph around high tops for periods.
Effect of wind on you?	Arduous conditions with significant wind chill and buffeting. Particularly gusty as showers move in.
How wet? (Precipitation and its impact)	Showery bursts with hail, chance thunder Frequent showers, falling as sleet or snow on highest tops. Concentrated into band that will move through during the morning, risk hail and isolated lightning. Then ongoing brief showery bursts.
Cloud on the hills?	Often covering the tops Bases varying, but will often descend onto the tops, and fairly extensive for several hours western tops, particularly as showers move through.
Chance of cloud free summits?	30%
Sunshine? Air clarity (below cloud)	A little sun coming through in west, more common in east away from showers. Visibility sometimes poor due to rain, intermittently good, though some haze near coast.
How Cold? (at 900m)	1C. Wind chill feeling like -15C.
Freezing Level	Around 1000m

	Saturday 29 November	Sunday 30 November
How windy? (On the summits)	High uncertainty: Direction varying mostly from east to north-northwesterly, 30 to 50mph, may ease briefly.	N'NW'ly 20-25mph early morning, risk stronger up to dawn, easing W'ly 15mph. Increasing into night S-SW'ly 40mph.
Effect of wind on you?	Be prepared for significant wind chill with considerable buffeting and arduous or difficult conditions for periods.	Marked wind chill and blustery at first, likely to soon lessen. Risk deteriorating into night.
How wet? (Precipitation and its impact)	Risk of prolonged rain/upland snow Uncertainty over track of small scale low; but scope for a prolonged period of rainfall across the hills, with snow above 700-800m.	Local brief showers, flurries tops Wet underfoot, or icy on higher terrain with possible fresh snow on tops from overnight. Brief light showers mostly near to coasts in morning, snow flurries above 800m.
Cloud on the hills?	Extensive in rain and snow Hills covered widely in fog in prolonged rain and upland snow; perhaps for several hours or all day.	Most common higher western tops Cloud likely to often cap higher slopes in the morning, may come and go all day nearer to western coasts, but some breaks likely. Best clearer spells to tops further inland and eastwards.
Chance of cloud free summits?	20%	50%
Sunshine? Air clarity (below cloud)	Overcast. Visibility likely often poor due to rain or very poor on the tops due to snow.	Variable cloud and patchy sun. Visibility excellent out of cloud.
How Cold? (at 900m)	0C	0 or -1C. Feeling like -8C if exposed to wind in morning.
Freezing Level	900m	800 to 900m

Planning Outlook

All mountain areas of Britain from Saturday, 29 November, 2025

Colder over the weekend with the mountains near or below freezing point, including frost into glens in Scotland by Saturday night. A small scale low on Saturday most likely affects England and Wales bringing rain , upland snow and a core of strong winds for a time. Sunday then mostly dry, bright and cold. Next week, Atlantic lows passing across or just north of Britain will bring frequent rainfall to western mountains together with upland gales. A mix of chilly westerly air and some milder southwesterlies. Freeze-thaw cycles, with periods of fresh snow mostly for Scottish hills, briefly high tops elsewhere.

Forecast issued at 16:30 on Thursday, 27 November, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
