General Summary for Tuesday, 2 December, 2025

British Mountain Summary: Based on forecast chart for noon 2 December, 2025

Hail showers will frequent west coast hills fairly widely; snow on the highest tops with risk of isolated lightning. Drier inland, particularly northeast Scotland where sunny bursts will occur. Chilly, feeling cold in a brisk southwesterly wind; this easing in Wales and south Pennines afternoon.

Headline for Eryri / Snowdonia National Park

Hail showers, mostly west; breezy with flood risk

Detailed Forecast for Tuesday, 2 December, 2025

How windy? (On the summits)	Southwesterly 25-30mph, typically strongest near and north of Snowdon, at times squally gusts 35mph.
Effect of wind on you?	Breezy, at times more blustery over tops, starting to affect comfortable walking and balance on ridges. Marked wind chill.
How wet? (Precipitation and its impact)	Frequent hail showers west; risk flooding Showery bursts coming inland from Cardigan Bay, mostly Y Garn and southward; risk hail, at times snow falling on highest tops with a chance of isolated thunder. More often dry eastern hills, though perhaps wetter here later. Wet underfoot, streams in spate, possible flooding after previous rain.
Cloud on the hills?	Tops and high west slopes often shrouded, patchy to the east Often covering western hills, bases varied above 600 to 800m, lowest and most persistent near west coast up to Llyn peninsula. Best breaks toward northeast from Ogwen and hills around Bala/Berwyn.
Chance of cloud free summits?	30% west, to 60% inland/east.
Sunshine? Air clarity (below cloud)	Glimpses of sun mostly toward east and north, where visibility often very good. Reduced to poor at times where in showers.
How Cold? (at 900m)	1 or 2C. Wind chill feeling like -7 to -10C.
Freezing Level	Just above the summits

Eryri / Snowdonia National Park - Looking Ahead

	Wednesday 3 December	Thursday 4 December
How windy? (On the summits)	Southwesterly 25-35mph, some stronger gusts in exposure.	Pre-dawn, southerly 40-45mph. Soon westerly 25-30mph, gradually easing as the day goes.
Effect of wind on you?	Comfort of walking affected, particularly in exposure where conditions will be more strenuous. Feeling cool.	Arduous conditions around dawn with wind chill will soon start to ease, trending towards fairly small effects.
How wet? (Precipitation and its impact)	Showers west, more rain later Frequent showers onto high tops and western slopes facing the Llyn Peninsula and Cardigan Bay; showers tending to merge afternoon. Only odd showers Carneddau and east Wales until later rain.	Some showers west Morning patchy rain passes to the east, giving way to scattered showers off Cardigan Bay. Greatest concentration of showers likely south of Snowdon; substantially dry east and north.
Cloud on the hills?	Covering high tops and western slopes Shrouding the high tops with bases as low as 600m on slopes facing Cardigan Bay. More patchy with high bases east Wales. A few afternoon hours may see higher bases.	Improving to banks over high tops Variable banks of cloud on high terrain, a few lower banks too, tending to clear through morning to just banks over high terrain as showers come and go. An increasing chance of clear summits, particularly east.
Chance of cloud free summits?	20%, rising to 40% east	Rising to 50%
Sunshine? Air clarity (below cloud)	Glimpses of sun east Wales, likely overcast west. Very good visibility.	Glimpses of weak sun through high cloud appearing afternoon. Good visibility though some haze.
How Cold? (at 900m)	2C. Feeling like -10C in direct wind.	1 or 2C. Feeling like -12C early in the day in the wind.
Freezing Level	Above the summits.	Just on the high summits at dawn, likely lifting above the summits.

Planning Outlook

All mountain areas of Britain from Wednesday, 3 December, 2025

Low pressure circulating to the west and north will dominate the weather for the next 7 to 10 days, bringing generally unsettled weather. A brief period of slack pressure on Thursday into Friday will ease winds for a time though patchy rain will linger in several areas. Strong southwesterly winds return over the weekend bringing cloud and rain to many mountains, most persistent on southwestern slopes. Several low pressure systems will continue crossing the British Isles through the week; often showery and cloudy in the west with broader bands of rain regularly passing east. Wind speed likely to vary though often quite strong with risk of gales coming and going. Brighter, drier periods will punctuate the unsettled weather next week but these likely short-lived.
