General Summary for Saturday, 13 December, 2025

British Mountain Summary:

Based on forecast chart for noon 13 December, 2025

Increasingly severe conditions Scottish Highlands: gusty storm-force winds on high terrain and becoming wet from the west. Gales in England and Wales, severe from Snowdonia towards Lakeland/north Pennines; drizzly rain on western slopes, patches drifting east. Driest south Pennines.

Headline for Eryri / Snowdonia National Park

Wind strengthens, severe gales in exposure; damp west slopes

Detailed Forecast for Saturday, 13 December, 2025

How windy? (On the summits)	Southwesterly, strengthening during daytime from 35-40mph to 45-55mph afternoon, strongest gusts over tops up to 60mph+, staying strong into nighttime.
Effect of wind on you?	Increasingly challenging walking conditions, mobility becoming difficult on higher exposed tops with powerful gusts; significant wind chill.
How wet? (Precipitation and its impact)	Small amounts of rain west, more overnight Patchy spots of rain or drizzle, may be often damp west coastal areas and high tops, though total rainfall small. Increasing risk more frequent rain overnight hours.
Cloud on the hills?	Mostly high and western terrain Cloud banks drifting over higher tops, most frequent on hills near to western coasts where bases often down to 600-700m. Higher base inland and northward, at times breaking above tops north of the A5.
Chance of cloud free summits?	30%
Sunshine? Air clarity (below cloud)	Early sunshine inland, high cloud gradually building through the day. Hazy west, visibility reduced in rain, but more often good toward east.
How Cold? (at 900m)	3 or 4C, tending to rise a little late in day and overnight, 5C or locally 6C north of the A5. Wind chill feeling around -10C later.
Freezing Level	Above the summits.

All mountain areas of Britain from Sunday, 14 December, 2025

A brief spell of drier-brighter weather on Tuesday, but otherwise staying unsettled into next week as southwesterly winds prevail and low pressure systems pass to the northwest of Scotland; sustained gales over the mountains, severe or stormy for periods. Bands of rain will regularly pass eastward across most areas, showery in the west between wetter spells with hail at times. Expect very wet ground conditions and further flooding of streams and some rivers. Mild for the time of year, temperatures only just below freezing intermittently on higher Scottish tops, even here will experience spells above freezing with thawing, any lying snow patchy, but beware some icy surfaces on the very highest tops where some refreezing occurs. Detail becomes very uncertain after next weekend though temperatures likely to drop.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
