General Summary for Sunday, 14 December, 2025

British Mountain Summary:

Based on forecast chart for noon 14 December, 2025

Extensive rain, sustained heavy falls over many western mountains, expect flooding. Smaller amounts of rain toward the N/E Cairngorms, also S/E Wales and Peak District. Widespread gales, powerful gusts around high tops, locally downslope to east. Blanket cloud across hills, lowest in west.

Headline for Eryri / Snowdonia National Park

Gales, severe in places. Wettest toward west, low cloud.

Detailed Forecast for Sunday, 14 December, 2025

How windy? (On the summits)	Southwesterly, 45-60mph, powerful gusts around high tops and in places downslope, tending to strengthen during daytime, reaching 70mph higher mountains.
Effect of wind on you?	Arduous conditions over the hills. Strong gusty winds will challenge balance and stability all day, including less exposed slopes. Significant wind chill.
How wet? (Precipitation and its impact)	Rain frequent or persistent west; less east Rain fairly persistent western hills, particularly Porthmadoc to Snowdon group, sometimes drizzly, but periods of steadier rain. Becoming constantly heavier onward into night. Patchier and smaller amounts eastward.
Cloud on the hills?	Extensive, lowest west Cloud cloaks the high terrain of Snowdonia NP with bases down to middle western slopes, often to 500m or lower on/nearest Llyn peninsula. Higher bases from Berwyn group to Carneddau, but often covering tops.
Chance of cloud free summits?	20%
Sunshine? Air clarity (below cloud)	Sunshine unlikely; dull in west with haze near coast. Better visibility out of cloud east/north.
How Cold? (at 900m)	5 or 6C; little change with added height above 600m. Feeling like -5 to -8C in direct wind.
Freezing Level	Above the summits

All mountain areas of Britain from Monday, 15 December, 2025

Prolonged rain will leave flooding of streams and rivers in many mountain areas early in the new week, with the exception of northeastern Scotland. A frontal system will eventually pass eastwards Monday-Tuesday, wind easing; dropping to freezing above 900m, beware of ice forming on higher Scottish mountains. Drier conditions for many on Tuesday, though showery near west coast of Scotland. By Wednesday, another system sweeps in from the Atlantic bringing further rain and gales. A risk of more heavy rain particularly England and Wales later in the week. A change of weather pattern is likely in the run up to Christmas, as high pressure builds northward, bringing drier weather, possibly chillier with time.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
