General Summary for Monday, 15 December, 2025

British Mountain Summary:

Based on forecast chart for noon 15 December, 2025

A slow-moving area of rain affects England and Wales, heavy falls over south-facing hills, flooding likely. Drier for much of Scotland, though some showers affect the west coast; beware flooding after previous rain. Back just below freezing over higher Munros, some icy surfaces on tops.

Headline for Eryri / Snowdonia National Park

Rain often heavy, low cloud; gusty wind easing.

Detailed Forecast for Monday, 15 December, 2025

How windy? (On the summits)	Southwesterly 30-40mph from dawn, but easing during morning from west to 20-25mph, or less afternoon.
Effect of wind on you?	Strenuous walking at first; feeling chilly. Tending to ease to small effects.
How wet? (Precipitation and its impact)	Rain most of the day, flooding Rain continuing from overnight into the day, some steadier and heavier falls, though easing off at times more northwestern areas. Fading widely into evening. Very wet underfoot, streams in spate, expect flooding.
Cloud on the hills?	Fairly extensive Shrouding the mountains widely, lowest west where reaching lower slopes near to coasts. Highest bases toward north of A5, local breaks above 800m.
Chance of cloud free summits?	20%
Sunshine? Air clarity (below cloud)	Overcast and dull. Visibility mostly poor due to rain, may improve far west.
How Cold? (at 900m)	3 or 4C. Feeling like -5C in strongest early wind.
Freezing Level	Above the summits

	Tuesday 16 December	Wednesday 17 December
How windy? (On the summits)	Westerly 10 to 20mph.	South-southwesterly 45 to 60mph, powerful gusts in places downslope to north of higher tops.
Effect of wind on you?	Fairly small.	Challenging conditions over the hills, walking difficult in places higher up, sudden buffeting to some mid-slopes.
How wet? (Precipitation and its impact)	Largely dry Chance of an odd light shower mainly near to the west coast. Very wet underfoot following previous heavy rain, streams in spate, flooding.	Rain most of day, often heavy Rain soon setting in from dawn, persistent widely much of the day, heaviest western areas. Breaking up into showers into the evening. Renewed flooding likely.
Cloud on the hills?	Patchy cloud over tops Patchy cloud banks most common nearer to coasts, may come and go above 600m, or 800m further inland. Breaks to tops more frequent hills near Bala.	Extensive Shrouding the hills widely all day, from mid-to-lower slopes western areas, but rarely above any higher tops, best chance north of A5 and toward Berwyn/Bala groups.
Chance of cloud free summits?	40%	10%
Sunshine? Air clarity (below cloud)	Occasional sun and thin high cloud. Visibility excellent out of cloud.	Overcast and murky, particularly west.
How Cold? (at 900m)	1 or 2C. Feeling like -4C directly in the breeze.	1 or 2C rising during day to 5C. Feeling like -8 to -12C directly in the wind.
Freezing Level	Close to highest summits above 900m. Slight frost sheltered valleys in morning.	Above the summits, but close to very highest tops above 1000m early in day.

Planning Outlook

All mountain areas of Britain from Tuesday, 16 December, 2025

Prolonged rain will leave flooding of streams and rivers in many mountain areas early in the new week, with the exception of northeastern Scotland. As a front clears Monday into Tuesday it will drop to freezing above 900m, beware of ice forming on higher Scottish mountains. Drier conditions for many on Tuesday, though showery near west coast of Scotland. By Wednesday, another system sweeps in from the Atlantic bringing further rain and gales. A risk of more heavy rain particularly England and Wales later in the week. A change of weather pattern is likely in the run up to Christmas, as high pressure builds northward, bringing drier weather, possibly chillier with time.

Forecast issued at 16:00 on Sunday, 14 December, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
