General Summary for Friday, 6 March, 2026

British Mountain Summary: Based on forecast chart for noon 6 March, 2026

A dry and sunny day for the Highlands and Galloway with early mist banks dispersing. Southerly winds strengthening in northwest later. England and Wales: Colder; patchy precipitation, snow to lower slopes N England, eases into afternoon, but still with extensive low cloud over hills, clearer breaks forming west coast.

Headline for Eryri / Snowdonia National Park

Patchy rain and snow at first, but easing. Hill fog extensive, clearing W coast PM.

Detailed Forecast for Friday, 6 March, 2026

How windy? (On the summits)	North-northeasterly 25-30mph from dawn, highest toward west coast. Gradually easing, to 15mph or less, direction becoming variable.
Effect of wind on you?	Walking inconvenienced in the morning toward west coast and feeling cold, effects soon becoming small.
How wet? (Precipitation and its impact)	Some morning rain or snow eases Some patchy rain or above 600m snow in the morning, but tending to dry up through the day from the west.
Cloud on the hills?	Extensive, but clearing afternoon west. From dawn, cloud may be extensive above 500m, odd lower patches; clearest hills facing Llyn Peninsula. An improving trend is probable with bases lifting and a rising chance of breaks on western hills, though high summits may struggle to clear.
Chance of cloud free summits?	40%, but rising to 70% toward west coast afternoon.
Sunshine? Air clarity (below cloud)	Mostly cloudy, sun likely to break through toward west coast. Rather murky with poor visibility where in low cloud or in early precipitation. May become very good from west coast.
How Cold? (at 900m)	-2 or -1C from dawn, rising a degree during daylight, likely rising further overnight.
Freezing Level	700-800m, lifting to the high summits, then above summits into night.

Eryri / Snowdonia National Park - Looking Ahead

	Saturday 7 March	Sunday 8 March
How windy? (On the summits)	Southeasterly 15 to 20mph, local gusty spots around higher western mountains.	Southerly 15 to 25mph
Effect of wind on you?	Fairly small.	Mostly small
How wet? (Precipitation and its impact)	Precipitation not expected	Risk of a little rain Risk of a little rain, mainly toward western mountains.
Cloud on the hills?	Local patches, lifting Some patchy cloud on mid to upper slopes early in the day, likely to lift above the hills.	Will cover western tops Uncertain detail, but cloud banks may cover higher terrain, mostly toward west coast.
Chance of cloud free summits?	80%	30% west coast, 70% elsewhere.
Sunshine? Air clarity (below cloud)	Cloud breaking to give occasional sun. Visibility very good, may be hazy lower down.	Broken cloud, giving a little patchy sun here and there. Dense haze.
How Cold? (at 900m)	4 or 5C, slight rise into afternoon.	4C
Freezing Level	Patchy slight frost in valleys at dawn, otherwise above freezing to tops.	Above the summits, but slight frost some inland valleys at dawn.

Planning Outlook**All mountain areas of Britain from Saturday, 7 March, 2026**

More cloud by Sunday as weak fronts encroach in from the west, some drizzly rain moving into parts of Scotland, hazy elsewhere. Patchy rain likely in the west at least early in the new week, likely dropping back just below freezing on the Munros for a time with some snowfall on higher areas. Winds fairly light early week, then a risk of strengthening southwesterly later in the week; changeable weather conditions with spells of rain coming in from the Atlantic. Remaining old snow cover on Scottish mountains stays largely consolidated with little change, only very patchy snow remains around highest tops in England and Wales.

Forecast issued at 16:38 on Thursday, 5 March, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
