General Summary for Monday, 1 June, 2026

British Mountain Summary:
Based on forecast chart for noon 1 June, 2026

Rain affects all areas during the day, some heavy falls widely, most constant in Wales. Low cloud across the hills, blanketing to lower slopes in west coastal areas. South-southwest winds, varied in Scotland, but stronger England and particularly Wales, here gales over tops. Fairly mild air, but feeling cooler in wind.

Headline for Eryri / Snowdonia National Park

Windy, increasingly gales. Prolonged heavy rain; low cloud.

Detailed Forecast for Monday, 1 June, 2026

How windy? (On the summits)	Southwesterly 30 to 40mph, strong gusts, generally rising speeds through morning, to 40-45mph, gusts 50mph high tops afternoon, possibly briefly stronger late afternoon, then tending to drop later evening into night.
Effect of wind on you?	Challenging walking conditions all day, buffeting gusts affecting balance, generally difficult during afternoon on high terrain. Considerable wind chill.
How wet? (Precipitation and its impact)	Constant rain sets in heavy Patchy rain from before dawn soon becomes frequent, setting in persistently with extended falls widely across Eryri NP. May ease somewhat north and east later in the day, but any dry windows very short. Becoming wet underfoot, streams rising rapidly, later in spate in west.
Cloud on the hills?	Extensive, lowest west coasts From dawn, a deck of cloud shrouds western slopes from 400-500m up, locally lower; some higher breaks near Carneddau to start, locally to summits, but cloud fills in above 500-600m nearly all hills, or to lower slopes west coast.
Chance of cloud free summits?	10%
Sunshine? Air clarity (below cloud)	Overcast and largely dull, local brighter moments in morning northeast. Visibility poor due to low cloud, but good at low heights in north/east.
How Cold? (at 900m)	9 or 10C; may rise a degree during day. Feeling below freezing in strongest wind, near -5C higher tops.
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Tuesday 2 June	Wednesday 3 June
How windy? (On the summits)	Westerly 20 to 25mph, occasional 30mph at least in gusts on tops.	South-southwesterly 35 to 50mph, risk 60mph at least in gusts on higher tops.
Effect of wind on you?	Noticeable breeze, at times starting to affect balance on exposed ridges.	Strenuous to often arduous walking in exposure, buffeting gusts knocking you off balance. Considerable wind chill.
How wet? (Precipitation and its impact)	Heavy thundery showers, may fade Showery rain on and off from dawn, some heavier bursts forming and passing eastwards morning into middle of day, risk isolated thunder. Fading for a time in west afternoon, some light showers later.	Rain and drizzle persistent Rain extends in from the west, becoming fairly persistent, heavy at times especially western hills, drizzly even when heavier rain fades; occasionally easing off northeast areas.
Cloud on the hills?	Lifting toward tops, breaks form Cloud banks covering higher slopes most widely in west in morning, becoming confined above 800m and higher breaks into middle of day onward. Patches likely return over western tops into evening.	Extensive Blanket low cloud across the hills, from lower slopes up near the coast, rarely above 500-600m inland, highest bases toward northeast of Ogwen valley.
Chance of cloud free summits?	50%	10%
Sunshine? Air clarity (below cloud)	Glimpses of sun, may become sunnier near west coast for a time afternoon. Visibility very good, reduced in showers.	Largely cloudy, dull, murky toward west in rain; hazy at best. Better visibility eastern hills below cloud.
How Cold? (at 900m)	8 or 9C. Feeling close to 0C if exposed to wind.	7C, slight rise if not in cloud. Wind chill feeling like -5 to -8C.
Freezing Level	Above the summits.	Above the summits.

Planning Outlook**All mountain areas of Britain from Tuesday, 2 June, 2026**

An unsettled spell through early June, possibly through the first two weeks, as low pressure over the north Atlantic and southwesterly winds dominate. Periods of rain mixed with showery days widely - the most constant rain over western mountains with low cloud often shrouding the hills. Wind speed will vary, but up to gale-force for periods over the hills, mostly in Scotland by later this week. Higher pressure to the south tends to expand across and just east of Britain later in the week, bringing some drier weather, but western hills even in England and Wales may remain often misty and drizzly. Temperatures near average, cooler at times. Mid June onward shows signs of drier and warmer weather.

Forecast issued at 16:00 on Sunday, 31 May, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
