General Summary for Friday, 10 July, 2026

British Mountain Summary: Based on forecast chart for noon 10 July, 2026

Hot sunshine persists across England, Wales, and southern Scotland; valley temperatures of 30C+. Starting bright and becoming very warm most of Scottish Highlands. Rain from Lochaber northward, later moving east with heavy thundery bursts forming over central/east highlands into evening.

Headline for Eryri / Snowdonia National Park

Hot sunshine; fair weather cloud builds, small risk late spotty rain

Detailed Forecast for Friday, 10 July, 2026

How windy? (On the summits)	Generally southeasterly but variable, 10-15mph. Sustained speeds will trend lower, trending southerly, but variable gusts increasingly common through afternoon.
Effect of wind on you?	Small, some nuisance gustiness forming afternoon.
How wet? (Precipitation and its impact)	Entirely dry most or all day Late in the afternoon, small chance of an isolated burst of rain; most hills remain entirely dry.
Cloud on the hills?	Hills soon clear A dawn, some sea fog drifts towards low slopes of northern Eryri/Snowdonia NP, this soon burning back for clear hills.
Chance of cloud free summits?	Practically certain
Sunshine? Air clarity (below cloud)	Strong sunshine, some thin high cloud, fair weather cloud building afternoon. Visibility good especially west, hazier east and north.
How Cold? (at 900m)	19C at dawn, rising to 22 to 23C, warmest on hills furthest from the sea; sheltered sunny valleys will approach 30C. Rather humid especially in west.
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Saturday 11 July	Sunday 12 July
How windy? (On the summits) Effect of wind on you?	Generally easterly 10-15mph, though variable and lower speeds at times. A strengthening trend into nighttime. Small.	Easterly 15-25mph, stronger gusts over tops at times, as well as downslope early, reaching 35mph. Often fairly small, but ease of walking becoming affected on high exposed terrain.
How wet? (Precipitation and its impact)	No rain expected	Likely dry Small chance of some patchy rain drifting onto northern slopes in the morning, but the hills more likely entirely dry.
Cloud on the hills?	Hills clear	Hills soon clear Scattered ribbons of cloud on east Wales slopes between 500-800m, these soon thinning and dissipating.
Chance of cloud free summits?	Nearly certain	Above 90%
Sunshine? Air clarity (below cloud)	Extensive sunshine, some thin high cloud, patchy fair weather cloud building afternoon. Very good visibility.	Mostly sunny, some thin high cloud. Good visibility, a light haze.
How Cold? (at 900m) Freezing Level	19 to 21C, or a degree higher towards Penygader (valleys approaching 26C, or warmer east Wales). Above the summits.	15 to 17C, a degree warmer towards Penygader (where valley temperatures will approach 26C). Above the summits.

Planning Outlook**All mountain areas of Britain from Saturday, 11 July, 2026**

Staying warm in Scotland, hot for England and Wales into the weekend. High pressure shifts northward, facilitating a strengthening easterly wind across most areas. Some lingering cloud and rain over the Scottish Highlands Saturday with some risk of heavier thundery bursts on Saturday morning in the east. The weekend is likely dry across England and Wales with fairly extensive sun, some sea fog increasingly affecting northeastern hill groups later weekend.

Easterly wind persists next week, sometimes quite strong England and Wales. Mostly sunny and very warm, including Scottish Highlands. Low pressure south of the country starts pushing showers into Wales, some heavy and thundery, though confidence is low. Detail increasing uncertain later next week, but Scotland likely stays dry.

Forecast issued at 15:58 on Thursday, 9 July, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
