General Summary for Thursday, 30 July, 2026

British Mountain Summary:

Based on forecast chart for noon 30 July, 2026

Cool, windy, and showery in Scotland. Gales and heavy showers pass west-to-east across the highlands, showers most frequent with lightning risk north. Starting breezy with rain over the Pennines and Wales, this clearing east for sun, a few odd showers northwest England. Mild-to-warm England and Wales.

Headline for Eryri / Snowdonia National Park

Early showers and cloud clear for increasing sun

Detailed Forecast for Thursday, 30 July, 2026

How windy? (On the summits)	West-northwesterly 10-20mph, strongest wind early with notable gusts over high tops and ridges.
Effect of wind on you?	Affecting ease of walking with some notable gustiness over high terrain early, but otherwise fairly small effects.
How wet? (Precipitation and its impact)	Early showers clear A band of showery rain around dawn clears east through morning to be largely dry. An odd shower onto western hills may follow, but afternoon is largely dry. Light showers possible by dusk in west.
Cloud on the hills?	Shrouding high terrain early, clear afternoon Fairly extensive above 700-800m at dawn, lower banks common, around rain. Bases soon rise and break as rain passes east, a few lingering caps over the summits around midday, but then further breaking up afternoon.
Chance of cloud free summits?	Rising to 80%
Sunshine? Air clarity (below cloud)	Fairly cloudy start, then sun breaking through, to become mostly sunny through afternoon. Visibility very good.
How Cold? (at 900m)	7 to 9C, may warm slightly eastern hills. Feeling near 0C in exposure to wind.
Freezing Level	Above the summits.

All mountain areas of Britain from Friday, 31 July, 2026

Cool and showery westerlies into the weekend, windy over high terrain; western hills often capped in cloud. Southern Pennines and Wales likely see only scattered showers and remain warm. Cloud encroaches from the southwest on Sunday, winds turn southerly and warmer air wafts back across England and Wales. A complex area of low pressure is then expected to circulate slowly over Britain early next week, bringing areas of rain and heavy showers, some thundery downpours possible. Winds varying, trending northerly and strengthening, to gales over high summits on Tuesday. A window of improvement from midweek, which may persist into the weekend, but a showery northwesterly persists in Scotland. Beware ongoing fire management restricting access to some mountains.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
