General Summary for Sunday, 16 August, 2026

British Mountain Summary:

Based on forecast chart for noon 16 August, 2026

Mostly light rain and drizzle will drift in from the west, some western hills often damp throughout the day and shrouded in cloud. Rain patchier northeastward across the Highlands, but a risk of local bursts of rain forming in the afternoon. Mid & south Wales largely dry. Generally light winds.

Headline for Eryri / Snowdonia National Park

Some dampness north, cloud lowers later.

Detailed Forecast for Sunday, 16 August, 2026

How windy? (On the summits)	Northwest turning west-southwesterly, 10 to 15mph or at times less, rising a little through afternoon, 20mph into evening.
Effect of wind on you?	Mostly small, feeling breezier later.
How wet? (Precipitation and its impact)	Occasional light rain mainly north A few odd patches of light rain drift onto the hills mainly northwestern areas. More often dry toward mid Wales and most eastern hills.
Cloud on the hills?	Breaks to tops, but later lowering Banks of cloud mostly western hills in morning, lifting and likely off many summits for extended periods. Patches drift over northern tops at times. Later in day, greater risk of cloud lowering widely, forming to mid-slopes in west.
Chance of cloud free summits?	60%, later in day dropping to 20%
Sunshine? Air clarity (below cloud)	Varied cloud and sun weakened by high cloud; often cloudier northwest. Very good visibility.
How Cold? (at 900m)	9 or 10C, only slight rise, mainly east.
Freezing Level	Above the summits.

All mountain areas of Britain from Monday, 17 August, 2026

Low pressure initially to the north of Scotland early in the new week will eventually envelop the whole of Britain next week bringing generally unsettled and cooler conditions increasingly widely. Often blustery widely, west turning northerly winds later in week - becoming notably chilly over higher mountains. Rain extends into Scotland on Monday, turning heavy, then moves south over England and Wales by Monday night into early Tuesday . The rest of the week sees showery rain common for all areas, the rain most persistent in western Scotland, but heavier showery bursts and thundery downpours become widespread mid to late week.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
