## General Summary for Monday, 31 August, 2026

### British Mountain Summary:

#### Based on forecast chart for noon 31 August, 2026

Showers scattered across most hills through morning, locally clustering for frequent falls with heavy bursts. Showers gradually clear eastward, spotty light rain fades out with time as sunny bursts break out (though weakened by high cloud). Cool-to-mild, but feeling chilly in a strengthening wind.

### Headline for Eryri / Snowdonia National Park

Windy with showers, both easing afternoon

## Detailed Forecast for Monday, 31 August, 2026

|                                                   |                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Northwesterly 35-40mph early in the day, gradually shifting westerly and easing, 20-25mph later or lower southernmost areas.                                                                                                                                                                             |
| <b>Effect of wind on you?</b>                     | <b>Blustery, making walking uncomfortable on exposed high terrain, in places frequent buffeting though morning with market wind chill; effects will ease with time.</b>                                                                                                                                  |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Showery rain, fading afternoon</b><br>Showery rain frequent for several hours, some heavier moments mixed in, then tending to improve from the west to fewer showers through afternoon; a lingering drizzle on summits for a time, but this fades too.                                                |
| <b>Cloud on the hills?</b>                        | <b>Lowest morning, rising higher, breaks to summits later</b><br>Fairly extensive across the hills in the morning, to lower elevations for a time near west coast. The base rising toward upper slopes, increasing high breaks through afternoon, to summit height, some variable caps coming and going. |
| <b>Chance of cloud free summits?</b>              | <b>20% rising to 70%</b>                                                                                                                                                                                                                                                                                 |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Largely cloudy, glimpses of sun forming, then sun developing near coast and extending inland; high cloud later builds.<br>Visibility becomes good, some haze west.                                                                                                                                       |
| <b>How Cold? (at 900m)</b>                        | 7 or 8C, little change all day, though may be slightly warmer in the early hours. Feeling near or just below freezing directly in the wind.                                                                                                                                                              |
| <b>Freezing Level</b>                             | Above the summits.                                                                                                                                                                                                                                                                                       |

## Eryri / Snowdonia National Park - Looking Ahead

|                                                   | <b>Tuesday 1 September</b>                                                                                                                                                                                                                                                     | <b>Wednesday 2 September</b>                                                                                                                                                                                                                                                          |
|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | West to southwesterly 25 to 30mph, some stronger gusts forming at times.                                                                                                                                                                                                       | Southwesterly 30-40mph, gusty over the tops, and strengthening for a time, gusting up to 50mph or higher.                                                                                                                                                                             |
| <b>Effect of wind on you?</b>                     | <b>Blustery, affecting ease of walking and balance on exposed tops and ridges. Marked wind chill.</b>                                                                                                                                                                          | <b>Strenuous walking in exposure much of the day, more arduous moments with considerable buffeting and feeling chilly.</b>                                                                                                                                                            |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Generally damp in west</b><br>A mix of drizzle and some showery rain much of the day over western hills. Smaller amounts further east.                                                                                                                                      | <b>Rain into drizzle</b><br>Several hours of morning rain, briefly heavy. Rain will ease into drizzle, mostly affecting summits and high west slopes. A few patches of rain may return later.                                                                                         |
| <b>Cloud on the hills?</b>                        | <b>Fairly extensive, lowest west</b><br><br>Banks of cloud often cap higher slopes above 600 to 800m, lowest near Cardigan Bay. Some breaks at times, best further east where only patchy on tops. Late in the day, tending to fill in more extensively over all high terrain. | <b>Extensive, some improvement</b><br><br>Cloud soon fills in extensively from 600m upward, often lower around rain, widely to 400m and lower towards Cardigan Bay. As rain eases, bases rise, some breaks approach 800m, best east, but summits and upper west slopes stay shrouded. |
| <b>Chance of cloud free summits?</b>              | <b>30%</b>                                                                                                                                                                                                                                                                     | <b>20%</b>                                                                                                                                                                                                                                                                            |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Generally cloudy, glimpses of sun toward north and east on low slopes. Visibility reduced in rain, better if drier, more often east.                                                                                                                                           | A few sunny glimpses break out on low slopes later, good visibility here. Largely overcast and dull on high terrain.                                                                                                                                                                  |
| <b>How Cold? (at 900m)</b>                        | 9 or 10C, little change all day. Feeling around 0C in the wind on tops.                                                                                                                                                                                                        | 10C rising to 12 or 13C, staying elevated overnight. Feeling like 2 to 5C in direct wind.                                                                                                                                                                                             |
| <b>Freezing Level</b>                             | Above the summits.                                                                                                                                                                                                                                                             | Above the summits.                                                                                                                                                                                                                                                                    |

**Planning Outlook****All mountain areas of Britain from Tuesday, 1 September, 2026**

A generally unsettled outlook during the first two weeks of September with frequent rain and strong winds. Low pressure dominates and a series of frontal systems move in from the Atlantic. West to southwesterlies, often gale force over the mountains in the second half of this coming week. Heavy rain most prolonged in the west where increasingly wet underfoot, streams rising to be in spate. Low cloud often covering the hills, rarely clearing western summits. Temperatures varying, some notably cooler days for Scotland, at times more humid air mainly toward the south. A few brighter windows will break out, mostly south and eastern areas, but always brief and any detail on timing remains uncertain.
