General Summary for Sunday, 6 September, 2026

British Mountain Summary:

Based on forecast chart for noon 6 September, 2026

Gales spread widely across Scotland, severe over high north and west tops. Drizzle over the Highlands, rainy early and late, wettest Northwest Highlands. Early showery rain over Wales passes into England, clearing northeast for sun through high cloud afternoon; windy here too. Warm, but feeling chilly in wind.

Headline for Eryri / Snowdonia National Park

Early showery rain, sun breaks out; windy, gale-force gusts

Detailed Forecast for Sunday, 6 September, 2026

How windy? (On the summits)	South to southwesterly 30 to 45mph, very gusty in places, including downslope north of major summits, and may rise further for a few afternoon hours.
Effect of wind on you?	Frequent buffeting across the hills, walking and balance challenging in places, not just on high terrain, and more widely for a few afternoon hours. Feeling cool in exposure despite warm air.
How wet? (Precipitation and its impact)	Soon largely dry Morning showery rain passes to the northeast as midday approaches. A drizzle may linger, but this likely clears as well for a mostly dry afternoon. Around or after dusk, patchy rain returns from the west.
Cloud on the hills?	Mostly west coastal slopes in the morning Varied low cloud, mostly towards Cardigan Bay, occasionally spreading more widely in the morning around rain. Little cloud expected through afternoon, just a few varied banks on high western slopes, only returning more widely late/into night.
Chance of cloud free summits?	40% rising to 80% afternoon.
Sunshine? Air clarity (below cloud)	Sun increasingly breaking out, fairly widely afternoon through weakened by high cloud. Generally good visibility but some haze.
How Cold? (at 900m)	12C, humid all day, rising to 14 or 15C, locally warmer northeast. Feeling like 5C directly in the wind.
Freezing Level	Above the summits.

All mountain areas of Britain from Monday, 7 September, 2026

Generally unsettled onward into next week with spells of rain and showers moving in from the Atlantic, accompanied by frequently strong to gale force mountain winds. Temperatures will vary, mildest toward the south, but cooler air moves in from the north at times bringing higher Scottish tops occasionally close to freezing point. A few high pressure ridges will briefly bring brighter drier spells: Wednesday likely sees a brief good weather window, though cloud moves into the west with time, and indications suggest another window may arise Friday into Saturday, though this remains uncertain. Longer settled windows forming from mid-month, particularly England and Wales. Temperatures will be generally near or above average, best sunny windows around east hill groups.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service. 2026.
