General Summary for Tuesday, 15 September, 2026

British Mountain Summary:

Based on forecast chart for noon 15 September, 2026

Clusters of showers over Scotland from dawn, a few dry, bright breaks forming, mostly south, but pulses of showers return too. A band of rain over England and Wales just at dawn soon passes east for a bright window, followed by intermittent rain, driest windows later afternoon. Cool-to-mild and breezy.

Headline for Eryri / Snowdonia National Park

Blustery rain just at first, then showers and dry windows

Detailed Forecast for Tuesday, 15 September, 2026

How windy? (On the summits)	Westerly 20 to 25mph, sometimes 30mph over high tops and possibly 35-40mph just at first. Trending northwesterly later.
Effect of wind on you?	Often fairly small, though some blustery moments in exposure, particularly from overnight and just around dawn when walking will be strenuous with wind chill.
How wet? (Precipitation and its impact)	Pulses of rain Overnight rain likely clears eastward around dawn. Then pulses of showery rain come and go, brief heavier showers mixed in, dry windows between pulses but a few odd spots of rain here and there too.
Cloud on the hills?	Varying on higher tops Ragged cloud banks above 600-800m at first, soon mostly confined to 800-900m, but here may come and go for a few hours, some breaks forming at times between showers but then returning over high terrain as showers return.
Chance of cloud free summits?	40%
Sunshine? Air clarity (below cloud)	Patchy sun, mostly eastern areas, a few clearer sky windows but also cloudier periods. Visibility often very good, briefly reduced in showers.
How Cold? (at 900m)	11C at dawn, soon cooling to around 8 or 9C much of the day. Feeling close to or below 0C in wind at first, wind chill effect easing.
Freezing Level	Above the summits.

All mountain areas of Britain from Wednesday, 16 September, 2026

A brief window of brighter weather on Wednesday, though some scattered showers around and feeling fresher in cooler temperatures. Showers and strong wind return on Thursday, and then the weather stays often unsettled during the next week as westerlies prevail - areas of low pressure passing north of Scotland with frontal systems bringing bands of rain, followed by showers, wettest over western mountains in Scotland. Often windy, sustained periods of gale-force westerly winds over higher terrain; significant wind chill, particularly in the north where temperatures will occasionally approach freezing point on high Scottish tops. A brief window of high pressure may form Saturday into Sunday, and a chance of a window of higher pressure the following week, but confidence is currently low.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
