## General Summary for Tuesday, 22 September, 2026

### British Mountain Summary:

#### Based on forecast chart for noon 22 September, 2026

Scotland starts windy with rain in the northwest highlands, this spreading fairly widely over the highlands into afternoon and evening. Wind eases, some bright breaks in the far northwest. Feeling damp, warm, and often cloudy England and Wales, drizzle on west hills, odd patchy rain, but sun glimpses too.

### Headline for Eryri / Snowdonia National Park

Drizzly western slopes, rare light rain, sun breaks northeast

## Detailed Forecast for Tuesday, 22 September, 2026

|                                                   |                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | South to southwesterly 10 to 15mph, sometimes less, but a few stronger gusts over high tops will approach 20mph.                                                                                                                                                                                                                                                               |
| <b>Effect of wind on you?</b>                     | <b>Mostly small, but locally gusty which may feel more noticeable on exposed ridges.</b>                                                                                                                                                                                                                                                                                       |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Damp air, drizzle mostly west</b><br>Patchy drizzle mostly west coastal hills, feeling generally damp where in cloud. More often dry toward the north and east, though a few spotty afternoon showers may break out. Rainfall totals small.                                                                                                                                 |
| <b>Cloud on the hills?</b>                        | <b>Low cloud most persistent near coast</b><br>Varied cloud and fog banks from dawn, covering hills and in some valleys; highest summits may be just at or above cloud early in day. Banks tend to drift higher up and gradually thin, best north and east, summits around Carneddau possibly seeing some breaks. Low cloud likely to linger western hills, rarely above 600m. |
| <b>Chance of cloud free summits?</b>              | <b>30%</b>                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Largely cloudy, misty; some sun breaking through north and east, also some sun and clear air possible around dawn on high tops above cloud.                                                                                                                                                                                                                                    |
| <b>How Cold? (at 900m)</b>                        | 11 or 12C, humid; little change into evening and night.                                                                                                                                                                                                                                                                                                                        |
| <b>Freezing Level</b>                             | Above the summits.                                                                                                                                                                                                                                                                                                                                                             |

|                                                                                                            | Wednesday 23 September                                                                                                                                                                                                                                                                                                                                         | Thursday 24 September                                                                                                                                                                                 |

## Planning Outlook

**All mountain areas of Britain from Wednesday, 23 September, 2026**

A heavier swathe of rain moves east Wednesday morning, soon clearing Scotland but leaving a few showers behind, later clearing England and Wales. Southwesterly winds increase again on Thursday and rain later moves into western Scotland, but elsewhere is likely dry, bright in Wales and much of England. A variable outlook continues next weekend and beyond with high pressure building from the south at times with fairly warm and dry conditions, but Atlantic systems still pass to the north bringing occasional rain and showers toward western Scotland at least, strong wind here with sustained gales in the north. Next week remains on the unsettled side: west-southwesterly wind with bands of rain passing over most mountains, but a trend towards higher pressure brings longer settled windows into October.

**Forecast issued at 16:00 on Monday, 21 September, 2026**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
