General Summary for Wednesday, 23 September, 2026

British Mountain Summary:

Based on forecast chart for noon 23 September, 2026

Rain and strong winds soon clears east from Scotland, but lasts a few hours over northern England and Wales in the morning with some heavier bursts. A marked improvement follows as cloud lifts and breaks up. A few showers continue near west coasts of Scotland. Feeling rather chilly in a fresh breeze.

Headline for Eryri / Snowdonia National Park

Blustery, some heavy rain, improving to sunshine and clear hills.

Detailed Forecast for Wednesday, 23 September, 2026

How windy? (On the summits) Effect of wind on you?	Westerly 25 to 35mph from dawn into early morning and briefly very gusty. Soon turning northwesterly, lessening to 20-25mph, then gradually lower during afternoon. Dropping to very little wind onward into night. Blustery in morning with briefly powerful buffeting gusts, moderating but staying breezy and feeling increasingly rather cool in exposure; an improving trend.
How wet? (Precipitation and its impact)	Morning rain, clearing afternoon Drizzly on high terrain in the early hours, patchy rain by dawn soon becomes frequent for a few hours, some heavier bursts for a time in morning. Into middle of day, rain quickly clears away to the east to become largely dry, brief residual showers fade.
Cloud on the hills? Chance of cloud free summits?	Fairly extensive morning, well-clearing Most terrain above 600m shrouded much of morning, a few breaks but also more extensive for a time with ragged patches to forest canopies. Through afternoon, cloud lifts, and breaks up, just banks above 800m into evening, mostly towards Anglesey. 20%, rising to 70% through afternoon
Sunshine? Air clarity (below cloud)	Glimpses of sun, breaking out afternoon, mostly sunny by late in the day. Visibility poor for a time, then becomes excellent as rain breaks.
How Cold? (at 900m) Freezing Level	10C through morning, then cooling, to finish near 7C. Feeling just above 0C in strongest wind. Above the summits.

All mountain areas of Britain from Thursday, 24 September, 2026

Southwesterly winds increase again on Thursday and rain later moves into western Scotland, but elsewhere is likely dry, bright in Wales and much of England. A variable outlook continues into the weekend and beyond with high pressure building from the south at times with fairly warm and dry conditions, but Atlantic systems still pass to the north bringing occasional rain and showers toward western Scotland at least, strong wind here with sustained gales in the north. Next week remains on the unsettled side: west-southwesterly wind with bands of rain passing over most mountains, but a trend towards higher pressure brings longer settled windows into October.

Forecast issued at 16:28 on Tuesday, 22 September, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
