General Summary for Tuesday, 29 September, 2026

British Mountain Summary:

Based on forecast chart for noon 29 September, 2026

A windy start strengthens to widespread gales, powerful gusts not just on high terrain. Feeling chilly despite mild-to-warm temperatures, increasingly humid too. Some patchy rain and cloud moves north through Wales into England and later Scotland; northwest Scotland bright and dry well into the day.

Headline for Eryri / Snowdonia National Park

Wind to gale-force; some rain/drizzle, cloud thinning

Detailed Forecast for Tuesday, 29 September, 2026

How windy? (On the summits) Effect of wind on you?	Southeasterly 35-40mph to start, turbulent gusts around high tops, passes and downslope. Strengthening, sustained speeds later to 50mph over tops, further strengthening overnight, strongest gusts to 65mph+. Soon challenging walking conditions on exposed terrain, but sudden buffeting also to some lower elevations. Most powerful gusts later knocking you around. Significant wind chill.
How wet? (Precipitation and its impact)	Some drizzle, rain on and off Spots of rain from time to time drift from the south, drizzly where in cloud; some broader pulses of rain are possible, some extended falls to the south and east. Evening into night, rain will set in from the west.
Cloud on the hills? Chance of cloud free summits?	Most persistent eastern hills Banks of cloud most persistent over east and mid Wales, may cling around tops much of the day. Higher and more broken cloud north and northwestern areas. Will thin and disperse somewhat afternoon, though patches may continue to cling to high tops. 40%
Sunshine? Air clarity (below cloud)	Some glimpses of weak sun through high cloud mostly northwest coastal areas, and perhaps more broadly later in the day. Poor visibility with a haze around, improving somewhat afternoon where cloud breaks.
How Cold? (at 900m) Freezing Level	10C just at dawn, soon rising, to reach 13 or 14C afternoon. Feeling humid, and only slight drop onward into night. Feeling just above freezing in direct wind. Above the summits.

All mountain areas of Britain from Wednesday, 30 September, 2026

A band of rain moves northeast through early Wednesday, leaving fresher and blustery south-southwesterlies into Wednesday and Thursday, showery in the west but often bright between showers, particularly eastern areas. Friday will be a wetter day again, the rain quite frequent with extensive cloud over western hill groups and quite windy in England and Scotland. On Saturday, higher pressure tends to expand from the south, bringing more settled weather to England and Wales; temperatures generally mild, some cool nights when skies are clear. Scotland will stay cloudier and windier, particularly in northern areas early next week, some drizzle in the northwest and occasionally broader bands of rain slipping eastward.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
