General Summary for Thursday, 1 October, 2026

British Mountain Summary:

Based on forecast chart for noon 1 October, 2026

Showers, although in Scotland away from near the coast north from Mull, very few. Cloud will progressively lift above most mountain areas, particularly away from showers.

Headline for Eryri / Snowdonia National Park

Frequent early showers ease, plentiful sun

Detailed Forecast for Thursday, 1 October, 2026

How windy? (On the summits)	Southwesterly 20-25mph, some gustiness to start. Trending stronger later, finishing at sustained 30mph and rising further overnight.
Effect of wind on you?	At times blustery in exposure with some buffeting in gusts and wind chill. Deteriorating overnight.
How wet? (Precipitation and its impact)	Showers generally easing From dawn, showers streaming onto the mountains from the southwest, drizzly on the tops and towards Cardigan Bay. Drizzle will fade and showers gradually scattering with time, only local spots if any into evening.
Cloud on the hills?	Clinging to high west terrain At dawn fairly extensive from 600-700m upward west slopes, lower in showers; well broken Carneddau/Berwyn groups. Soon beginning to lift, some variability, mostly clearing near and north of A5. Banks likely cling to Snowdon with a few lower patches towards Cardigan Bay, a few windows of clear tops possible.
Chance of cloud free summits?	Rising to 70%
Sunshine? Air clarity (below cloud)	Patchy sunshine, extended sunny spells breaking out east of high terrain. High cloud building from the west later in the day. Good visibility, some haze which will thicken a bit.
How Cold? (at 900m)	8C, rising a degree east of high terrain. Around showers, temperature will fluctuate a few degrees.
Freezing Level	Above the summits.

All mountain areas of Britain from Friday, 2 October, 2026

Friday starts the weekend with windy and damp weather, rain quite frequent with extensive cloud for some. On Saturday, higher pressure expands from the south, gradually settling the weather in England and Wales. Scotland remains breezy with cloud and showers, mostly impacting western regions. The following week remains mixed: high pressure to the south and west bringing some windows of brighter, drier weather primarily to England and Wales, but active low pressure systems will break through as well for spells of widespread wind, sometimes gale force, and bands of rain followed by showers. Precise timing of settled versus unsettled weather is currently uncertain. Temperatures variably mild to cool, beginning to reach freezing on Scottish summits, or lower down on clear nights.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
