General Summary for Tuesday, 6 October, 2026

British Mountain Summary:

Based on forecast chart for noon 6 October, 2026

Chilly in Scotland, blustery showers northwest with hail, snow on summits. Showers well-scattered elsewhere, regular sun breaks. Patchy rain, drizzle, and low cloud affect England and Wales most of the day; some areas of east Wales see windows of cloud breaks and good visibility.

Headline for Eryri / Snowdonia National Park

Drizzle and fog, some patchy rain, trending more frequent

Detailed Forecast for Tuesday, 6 October, 2026

How windy? (On the summits)	Westerly 20-25mph, trending lighter and shifting northwesterly, around 15mph and sometimes less afternoon.
Effect of wind on you?	Fairly small.
How wet? (Precipitation and its impact)	Rain from time to time, mainly western hills Rain and drizzle on and off, mostly west Wales. Total rainfall mostly fairly small, but a few heavier showery moments are possible too.
Cloud on the hills?	Fairly extensive Fog across hills above 300 to 450m western hills much of the day, may temporarily drop below 200m coastal slopes during notable falls. Breaks to 600m east Wales, and some chance of a few more broad breaks just in the early hours to the east of high terrain.
Chance of cloud free summits?	20%
Sunshine? Air clarity (below cloud)	Some sunny glimpses in the east to start the day, becoming overcast, largely dull and misty on high tops and west slopes where visibility will be poor. Good visibility to the east during dry windows.
How Cold? (at 900m)	9 or 10C; may drop a few degrees late in day Snowdon range.
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Wednesday 7 October	Thursday 8 October
How windy? (On the summits)	Northwesterly 20-30mph, but perhaps rising slightly later in the day.	Northwesterly 30mph to start, lessening and shifting westerly, then significantly strengthening evening into night.
Effect of wind on you?	Will impact ease of walking and balance challenged at times, may deteriorate slightly. Considerable wind chill.	Blustery in exposure to start, becoming fairly small, then deteriorating overnight.
How wet? (Precipitation and its impact)	Early rain followed by hail showers Confidence low: Overnight rain will clear, possibly only slowly through morning from east Wales. A brief dry windows but showers then follow from the north, trending more frequent, risk hail.	Showers ease, rain later From dawn, showers push onto most hills from the north, tending to lessen to become substantially dry. Later, rain returns from the west, patchy at first but increasingly frequent evening into night.
Cloud on the hills?	Fairly extensive on higher areas Cloud likely to shroud the mountains widely in rain, but as it clears to showers, cloud base rises to 750 to 900m, but dropping to 400 to 600m near showers. Generally lowest cloud base will be on Snowdon range.	Often covering tops, some breaks Cloud banks will cling to the high tops much of the day, lower bases towards the north and west early during showers, locally towards 600-700m. Cloud largely isolates to tops, a few breaks forming, but then returning extensively evening into night.
Chance of cloud free summits?	30%	Rising to 50%
Sunshine? Air clarity (below cloud)	Patches of sun will extend east - most sun mid Wales. Visibility sometimes poor, but otherwise good, although a haze.	Patchy sun, mostly sunny mid-Wales to start, high cloud increasingly thickening. Very good visibility.
How Cold? (at 900m)	4C; will feel as cold as minus 7C directly in winds.	3C, rising slightly, then a sharp rise into night to 10C or above.
Freezing Level	Above the summits.	Above the summits.

Planning Outlook

All mountain areas of Britain from Wednesday, 7 October, 2026

A brief colder period with the wind easing on Wednesday and Thursday with bright sun breaking out - some snow showers will affect high terrain in Scotland, some hail mixed in as well. Westerly wind returns as Thursday goes, bringing bands of rain, low cloud and strong upland winds across Britain. Saturday remains blustery and showery but with bright breaks forming, and then Sunday sees a more settled day as a small area of high pressure builds in from the south. The following week looked mixed with bands of rain coming and going, punctuated by regions of high pressure, but typically on the cloudy side. Generally mild temperatures.
