General Summary for Sunday, 11 October, 2026

British Mountain Summary:

Based on forecast chart for noon 11 October, 2026

A fine day overall with light winds, sunshine and just patchy cloud around some mountain slopes. Isolated brief showers around coastal fringes at first will fade. Southerly winds tend to strengthen later in the day in western areas. Some patchy rain reaches southwest Wales.

Headline for Eryri / Snowdonia National Park

Largely dry, a lull in wind, sun and high cloud.

Detailed Forecast for Sunday, 11 October, 2026

How windy? (On the summits) Effect of wind on you?	West-northwesterly 20mph around dawn, easing in morning 10-15mph. By midday into afternoon, turning southerly, rising from west to 20-25mph, by dusk 30mph far west, reaching 40-45mph late evening into night. Mostly small until later in day, but more blustery conditions toward sunset, worsening after dark.
How wet? (Precipitation and its impact)	Largely dry until late Brief scattered light showers early morning, west coast hills, fading to be largely dry. By evening, odd spots develop, then rain pushes in from west onward into night.
Cloud on the hills? Chance of cloud free summits?	Clearing tops Patchy cloud drifting over some higher slopes mainly in western areas in the morning, but likely all dispersing or lifting above tops. Cloud lowers onto hills into evening and night extensively. 80%
Sunshine? Air clarity (below cloud)	Patchwork of cloud and sun; a veil of high cloud tending to thicken. Visibility excellent.
How Cold? (at 900m) Freezing Level	4C rising to 6C afternoon, lifting further after dark toward 10C. Feeling near/below freezing if exposed to stronger breeze. Above the summits. Slight frost inland valleys at dawn.

	Monday 12 October	Tuesday 13 October
How windy? (On the summits)	South-southwesterly 20 to 30mph, then late in day tending to increase, to 50mph onward into night.	West-southwesterly, overnight gales ease, perhaps a brief drop to 25mph, but mostly in the range 30 to 40mph.
Effect of wind on you?	Fairly small, but blustery around higher exposed terrain. Likely to deteriorate into the night.	Generally blustery over the mountains, more challenging at times on exposed high terrain; increasingly marked wind chill.
How wet? (Precipitation and its impact)	Generally damp, some steady rain Rain and drizzle most persistent over west coastal hills and Llyn peninsula, some steady or heavier rain more widely early and late. Patchier smaller amounts toward north and east, sometimes easing off.	Early rain then showers Heavy rain around dawn clears away eastwards in morning, leaving a brief drier window, but showers soon follow from the west, some heavier ones near to west coast, but these may later tend to ease.
Cloud on the hills?	Extensive, local breaks north Shrouding most hills all day, from lower elevations toward west coast, rarely above 400-500m inland. Higher bases north from Ogwen valley, occasional breaks above 600m. Perhaps an improvement afternoon.	Often capping high western tops Varied cloud banks from dawn, but lifting toward upper slopes and clearing some high tops for a time inland, but patches often cap higher tops in Snowdon group and near coast, lowering again in showers.
Chance of cloud free summits?	10%	30%
Sunshine? Air clarity (below cloud)	Overcast, dull or murky. Local brighter moments north and during afternoon.	Some sun breaking through occasionally in morning, often cloudy west. Visibility good as rain clears, but some haze in west, reduced further in showers.
How Cold? (at 900m)	10 or 11C, little change day and night. Feeling near to freezing if in stronger wind.	Mild 12C overnight but dropping to 8C by dawn, lowering further during day to 6C. Feeling later like -6C in stronger wind.
Freezing Level	Above the summits.	Above the summits.

Planning Outlook

All mountain areas of Britain from Monday, 12 October, 2026

Damp and mild southwesterly air moves across the country into Monday, winds strengthen again later to widely gale-force over the hills, heavier rain sweeps eastward overnight and into early Tuesday, followed by showers and a drop of temperature. Very unsettled west-southwesterlies continue into midweek - sustained mountain gales, possibly stormy at times and spells of heavy rain for all areas. A changeable westerly theme likely continues beyond mid-month - occasional windows of drier weather, but more often windy with rain or showers coming in from the Atlantic, sometimes cold enough to fall as snow on Scottish high tops.

Forecast issued at 8:06 on Sunday, 11 October, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
