General Summary for Thursday, 5 November, 2026

British Mountain Summary:
Based on forecast chart for noon 5 November, 2026

Extensive fog due to low cloud and patches of drizzle, but dry most western mountains where cloud base highest. Little wind N Scotland, but from near the central belt of Scotland southwards, blustery higher slopes, and in places very gusty west of major ridges.

Headline for Eryri / Snowdonia National Park

Gusty wind. Cloudy, risk drizzle. Extensive fog.

Detailed Forecast for Thursday, 5 November, 2026

How windy? (On the summits)	Easterly 25 to on higher slopes 30 or 35mph, although sometimes 40, locally 45mph. Very gusty some lower slopes.
Effect of wind on you?	**Will impact ease of walking in places balance a struggle in gusty wind (including some lower slopes west of major ridges). Considerable wind chill.**
How wet? (Precipitation and its impact)	**Pockets of drizzly rain, mainly or only east Wales** A few, probably brief, patches of drizzly rain east Wales. Little if any west Wales.
Cloud on the hills?	**Very extensive, though sometimes clearing western areas** Persistent fog above around 600-800m, although may occasionally break off higher summits. This unlikely east Wales and Carneddau, where risk patches at 300m in drizzle.
Chance of cloud free summits?	**20%**
Sunshine? Air clarity (below cloud)	Extensively cloudy. Visibility very good although slight haze.
How Cold? (at 900m)	3C. In the wind will feel as cold as minus 6C.
Freezing Level	Above the summits

Eryri / Snowdonia National Park - Looking Ahead

	Friday 6 November	Saturday 7 November
How windy? (On the summits)	Easterly, 15mph or in morning perhaps 20mph some higher areas Snowdon range. Will tend to ease through day.	Direction varied 10mph or less.
Effect of wind on you?	**Fairly small**	**Negligible**
How wet? (Precipitation and its impact)	**Little or no rain.** Most possibly all areas dry. But a little damp weather with pockets of very light rain will come and go across mainly east Wales and Carneddau	**Patches of drizzly rain** Total rainfall small; nevertheless, particularly east Wales, drizzly rain may fall for an hour or two.
Cloud on the hills?	**Extensive, particularly more eastern hills** Broadly, cloud base will rise westwards and through the day. Particularly in rain, pockets of or extensive cloud lower slopes east Wales, where base 450m or above by midday. Cloud mostly above 750m western hills.	**Extensive fog.** Low cloud will affect much of region above 200-400m, although westwards the cloud base will tend to be above 450 and higher areas will be between cloud layers.
Chance of cloud free summits?	**20%**	**10%**
Sunshine? Air clarity (below cloud)	Occasional sunshine, mainly west Wales. Good visibility, but misty in rain	Cloudy or dull. Hazy of foggy; misty in drizzle.
How Cold? (at 900m)	2C	3C
Freezing Level	Above the summits.	Above the summits.

Planning Outlook

All mountain areas of Britain from Friday, 6 November, 2026

High pressure will continue to be the main influence through the next week, particularly W & NW Highlands where extensively dry and wind often light. However, generally fog and low cloud may well never clear most mountains under the light wind. There will also be patches of drizzly rain, although total rainfall small.

Forecast issued at 12:15 on Wednesday, 4 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
