General Summary for Friday, 6 November, 2026

British Mountain Summary:
Based on forecast chart for noon 6 November, 2026

Fairly light wind and scattered patches of light rain, amounting to little in total. Cloud base will vary, extensive on higher mountains, but lower down some slopes cloud free, whilst sometimes adjacent slopes remain foggy (or even between cloud layers) - with changes occurring only slowly.

Headline for Eryri / Snowdonia National Park

Light wind. Extensive fog higher areas.

Detailed Forecast for Friday, 6 November, 2026

How windy? (On the summits)	Easterly, 15mph or in morning perhaps 20mph some higher areas Snowdon range. Will tend to ease through day.
Effect of wind on you?	**Small**
How wet? (Precipitation and its impact)	**Occasional rain - mainly mid Wales.** Most possibly all areas dry particularly summits closest to the west coast. But damp weather with pockets of very light rain will come and go and for a few hours the rain may be steady in parts of mid Wales.
Cloud on the hills?	**Extensive, particularly more eastern hills** Broadly, cloud base will rise slowly through the day, base typically 600 or 700m. However, areas of fog will 'hang' on lower slopes (above 300-450m), particularly those in east Wales, most or all day, whilst others clear.
Chance of cloud free summits?	**20%**
Sunshine? Air clarity (below cloud)	Occasional sunshine, mainly west Wales. Hazy and misty in rain.
How Cold? (at 900m)	3C
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Saturday 7 November	Sunday 8 November
How windy? (On the summits)	Direction varied 10mph or less.	Direction varied 10mph or less.
Effect of wind on you?	**Negligible**	**Negligible**
How wet? (Precipitation and its impact)	**Patches of drizzly rain** Total rainfall small; nevertheless, particularly east Wales, drizzly rain may fall for an hour or two.	**Risk of a little drizzle, total rainfall small** Little change with a few further pockets of light or very light drizzle.
Cloud on the hills?	**Extensive fog.** Low cloud will affect much of region above 200-400m, although westwards the cloud base will tend to be above 450 and higher areas may sometimes be between cloud layers.	**Extensive; cloud base sometimes very different on nearby slopes** Detail uncertain: Cloud extensive highest slopes. Lower down, fog clinging to many slopes from valleys up most or all day, whilst others are or become fog free or are between layers of cloud.
Chance of cloud free summits?	**10%**	**10%**
Sunshine? Air clarity (below cloud)	Cloudy or dull and extensively misty or foggy east Wales. A little sun here and there but still hazy west Wales.	Cloudy or dull with extensive fog - possibly brighter with glimpses of sun developing through day.
How Cold? (at 900m)	4C	4C
Freezing Level	Above the summits.	Above the summits.

Planning Outlook

All mountain areas of Britain from Saturday, 7 November, 2026

High pressure will continue to be the main influence into next week, particularly W & NW Highlands where extensively dry and wind often light. However, disappointing for other areas as 'gloomy' conditions predominate" patches of light rain and extensive low cloud and fog.
Into next week, an area of low pressure will bring rain and wind in from the southwest but northern Scotland may escape most or all the rain.

Forecast issued at 12:03 on Thursday, 5 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
