General Summary for Saturday, 7 November, 2026

British Mountain Summary:
Based on forecast chart for noon 7 November, 2026

Extensively cloudy and dull, some drizzle or light rain, but total amounts small. Areas of fog in places from low terrain upward and cloud banks across hills. Clearest hills generally further west, but limited sun. Generally light wind.

Headline for Eryri / Snowdonia National Park

Low cloud and some drizzle, local cloud breaks west.

Detailed Forecast for Saturday, 7 November, 2026

How windy? (On the summits)	Direction varied 10mph or less.
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**Patches of drizzly rain, odd coastal showers** Total rainfall small, but locally in east Wales, drizzly rain may fall for an hour or two. As the day goes on, one or two light showers may drift in from the Irish Sea onto west coastal hills.
Cloud on the hills?	**Extensive fog across the hills.** Low cloud will affect much of region with some fog to lower slopes in east, although westwards the cloud base locally much higher and higher areas may sometimes emerge between cloud layers, though tops rarely clear.
Chance of cloud free summits?	**10%**
Sunshine? Air clarity (below cloud)	Cloudy or dull and extensively misty or foggy east Wales. A little sun here and there but still hazy west Wales, some improvement.
How Cold? (at 900m)	4C
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Sunday 8 November	Monday 9 November
How windy? (On the summits)	Direction varied 10mph or less.	East-southeasterly 10-15mph, rising during day to 20mph, reaching 25mph and increasingly gusty from dusk onward.
Effect of wind on you?	**Negligible**	**Fairly small, but becoming more noticeable as the day goes on.**
How wet? (Precipitation and its impact)	**Patchy drizzle** Local pockets of light or very light drizzle.	**No rain expected** Locally feeling damp where in fog, mainly east Wales.
Cloud on the hills?	**Extensive; cloud base sometimes very different on nearby slopes** Some local variations, but cloud likely extensive highest slopes. Lower down, fog clinging to many slopes from valleys up most or all day, whilst others are or become fog free or are between layers of cloud.	**Low cloud or fog mostly east** Some uncertainty, but areas of fog from lower elevations up in the morning toward east Wales in particular, also some cloud banks drifting over high terrain. Overall better breaks and clearer hills likely further westwards.
Chance of cloud free summits?	**10%**	**50%**
Sunshine? Air clarity (below cloud)	Cloudy or dull with extensive fog - some areas brighter with glimpses of sun developing through day.	Some sun mainly in the west, a thin veil of high cloud; local very good visibility west; further east more likely hazy or foggy.
How Cold? (at 900m)	4C	4C, may rise slightly toward west. Feeling below freezing as wind increases.
Freezing Level	Above the summits.	Above the summits. Local frost pockets in sheltered valleys around dawn.

Planning Outlook

All mountain areas of Britain from Sunday, 8 November, 2026

High pressure persists into the start of the new week with light winds for much of Scotland, though an easterly wind will increase for England and Wales. The west and northwest Highlands most extensively dry with cloud breaks and sun. However, disappointing for other areas as 'gloomy' conditions predominate, with patches of light rain and extensive low cloud and fog. Into midweek, an area of low pressure will bring rain and wind in from the southwest but northern Scotland may escape most or all the rain. Late in the week, indications favour a switch to a colder northerly flow for a time in Scotland at least and brings scope for snow showers to northern mountains.

Forecast issued at 8:05 on Saturday, 7 November, 2026
