General Summary for Monday, 9 November, 2026

British Mountain Summary:
Based on forecast chart for noon 9 November, 2026

Many Scottish mountains sunny, but variable areas of low cloud and low-level fog. Murky conditions more widely Pennines and east Wales. No rainfall generally, but dampness in the air locally. Light wind for most places; increasing easterly breeze for Wales.

Headline for Eryri / Snowdonia National Park

Sunshine west; foggy east. Increasing breeze.

Detailed Forecast for Monday, 9 November, 2026

How windy? (On the summits)	East-southeasterly 15mph at first, rising during day to 20mph, reaching 25mph and increasingly gusty from dusk onward.
Effect of wind on you?	**Fairly small, but becoming more noticeable as the day goes on.**
How wet? (Precipitation and its impact)	**No rain expected** Locally feeling damp where in fog in east Wales.
Cloud on the hills?	**North and west mountains generally clear** Very little if any cloud across the north and west of Eryri. Further east and into mid Wales, areas of fog from lower elevations up in the morning, also some cloud banks drifting over high terrain, whilst some tops may emerge out of cloud or between banks.
Chance of cloud free summits?	**20% east-mid Wales, to 80% west and north.**
Sunshine? Air clarity (below cloud)	Mostly sunny in the west, very good visibility; a thin veil of high cloud possible. Further east hazy or foggy.
How Cold? (at 900m)	4C, slight rise toward west. Feeling below freezing as wind increases.
Freezing Level	Above the summits. Local frost pockets in sheltered valleys around dawn.

Eryri / Snowdonia National Park - Looking Ahead

	Tuesday 10 November	Wednesday 11 November
How windy? (On the summits) **Effect of wind on you?**	Southeasterly 25 to 35mph, gusty in places around major summits, high passes and some western downslopes. **Strenuous walking in exposure, gusty areas making balance difficult at times. Considerable wind chill.**	Easterly 20 to 30mph, stronger gusts in places around tops, passes and locally to some lower slopes; may ease a little. **Starting to affect comfortable walking on exposed terrain, variable gusts to some lower elevations. Marked wind chill.**
How wet? (Precipitation and its impact)	**Rain developing mainly mid Wales** The morning likely dry, perhaps well into afternoon, but rain likely moving gradually in from the south later. Likely patchy small amounts toward northwest, but may become more persistent mid-Wales.	**Patchy rain mainly mid Wales** An area of rain more likely toward mid Wales, may give steady light rain for a few hours, sleet higher tops - some uncertainty, but tending to break up and fizzle out as the day goes on. Very little may affect northern mountains.
Cloud on the hills? **Chance of cloud free summits?**	**Most persistent south** Likely to cover much high terrain, but locally varied - typically lowest and most extensive over east and mid-Wales, whilst further toward the northwest some breaks may occur to some upper slopes. **30%**	**Most extensive south, better northwest** Banks of cloud may fairly widely cover the hills, lowest and most persistent toward mid Wales and the Bala-Berwyn group, whilst further northwest cloud base higher and may be clearer to some tops. **20% east/mid Wales, 50% northwest**
Sunshine? Air clarity (below cloud)	Fairly cloudy, locally brighter northwest mainly morning, but sun weak if any. Visibility good if dry, becoming poor in rain.	Overcast, a veil of thick high cloud at best. Murky in rain, but visibility good where drier in northwestern areas.
How Cold? (at 900m) **Freezing Level**	5C. Feeling like -5C directly in the wind. Above the summits.	2C. Feeling like -6 to -8C directly in the stronger wind. Just above freezing on higher slopes.

Planning Outlook

All mountain areas of Britain from Tuesday, 10 November, 2026

Generally dry much of the week ahead in Scotland. Some variable cloud and fog early in the week. A gusty easterly wind for England & Wales and rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting into Wednesday in these areas, but very little extending further north. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800 m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Sunday, 8 November, 2026
