General Summary for Tuesday, 10 November, 2026

British Mountain Summary:
Based on forecast chart for noon 10 November, 2026

Much of Scotland dry with sunshine; areas of low-level fog and frost. Some showers toward the far north. Fog from lower elevations upward for Pennines and east Wales, but much of northwest Wales and the Lakes have clearer hills. Rain moves into south Wales. Strong easterly winds for Wales.

Headline for Eryri / Snowdonia National Park

Gusty wind. Fog east, clearer west; a little rain later south.

Detailed Forecast for Tuesday, 10 November, 2026

How windy? (On the summits)	Southeasterly 25mph, gusty 30mph in places around major summits, high passes and some western downslopes.
Effect of wind on you?	**Starting to affect ease of walking in exposure, gusty areas affecting balance. Marked wind chill.**
How wet? (Precipitation and its impact)	**Rain developing later mid Wales** The morning widely dry, much of the day in northern areas, but rain moving in gradually from the south afternoon, later becoming more persistent mid-Wales, but patchy small amounts only by evening in north.
Cloud on the hills?	**Low cloud and fog mostly east and south, clearer northwest mountains** Northwest around the wider Snowdon group, for much of day the hills may stay clear. Varied extent of low cloud and fog inland; eastern areas foggy to low levels in morning, some tops may be above fog. Cloud banks tend to drift higher up and fill in increasingly from the south during the afternoon.
Chance of cloud free summits?	**30% east and mid-Wales; 70% northwest.**
Sunshine? Air clarity (below cloud)	Any sun weak due to a thick veil of high cloud. Visibility very good northwest, but murky and foggy much of east Wales.
How Cold? (at 900m)	3C, to local 5C west. Feeling like -5C directly in the wind.
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Wednesday 11 November	Thursday 12 November
How windy? (On the summits)	Easterly 20 to 30mph, stronger gusts in places around tops, passes and locally to some lower slopes; easing a little.	Northerly 20 to 30mph.
Effect of wind on you?	**Starting to affect comfortable walking on exposed terrain, variable gusts but lessening. Marked wind chill.**	**Affecting comfortable walking on exposed high terrain, gusts may affect balance. Considerable wind chill.**
How wet? (Precipitation and its impact)	**A little rain mainly mid Wales** Patchy rain toward mid Wales, may give steady light rain for a few hours, tending to break up and fizzle out as the day goes on. Largely dry northwestern mountains around the wider Snowdon group.	**Rare brief showers** Chance of an odd light shower drifting onto coastal hills from the north, a snow flurry above 600m.
Cloud on the hills?	**Mostly eastern hills, little northwest** Banks of cloud lowest and most persistent toward mid Wales and the Bala-Berwyn group, whilst further north/west cloud base higher and patchier, most common around Carneddau, but increasingly clearing.	**Grazing tops at times** Occasional patches cap higher slopes from time to time, mainly areas facing north nearer the coasts.
Chance of cloud free summits?	**20% east/mid Wales, 50% northwest**	**80%**
Sunshine? Air clarity (below cloud)	A veil of cloud may thin from the north to allow sun to break through, mainly western areas. Poor visibility where in cloud and rain mid-Wales, but very good northwest.	Mostly sunny, a little patchy cloud toward coasts. Visibility excellent.
How Cold? (at 900m)	2 or 3C. Feeling like -5 to -8C directly in the stronger wind.	-1C. Feeling like -10C directly in the wind.
Freezing Level	Above the summits.	800m, or slightly higher near coast. Also frost many inland valleys in morning.

Planning Outlook

All mountain areas of Britain from Wednesday, 11 November, 2026

Dropping colder across all mountains during midweek as the wind shifts northerly and strengthens. Some showery snowfall across the Highlands on Wednesday, otherwise plenty of sunshine and very clear air late this week, for all areas - clearing away fog from early in the week. Into the weekend, as the wind shifts west then southwesterly, less cold air drifts in from the Atlantic bringing more cloud onto western hills - an increasing risk of rain in the west. A changeable outlook into next week with varying temperatures, stronger wind at times, rain and some upland snow possible. Unsettled patterns are more likely to prevail beyond mid-month.
