General Summary for Saturday, 14 November, 2026

British Mountain Summary:
Based on forecast chart for noon 14 November, 2026

Windy across higher areas, particularly so those near the north Irish Sea and Scottish Highlands (where widespread upland gales). Drizzly rain will affect some western mountains, but otherwise extensively dry. Much mountain terrain at least partly frozen, particularly morning.

Headline for Eryri / Snowdonia National Park

Windy, particularly west; sunshine most areas. Terrain partly frozen.

Detailed Forecast for Saturday, 14 November, 2026

How windy? (On the summits)	South or southwesterly between 25 and perhaps 35mph higher summits Snowdon area.
Effect of wind on you?	**Higher up considerable wind chill and strenuous walking and balance sometimes difficult - especially Snowdon to Tryfan and Carneddau.**
How wet? (Precipitation and its impact)	**Extensively dry although risk drizzly showers westernmost slopes.** Risk of a few light drizzly showers, or snow flurries higher slopes, Lleyn peninsula to western slopes of Snowdon.
Cloud on the hills?	**Generally very little - may form or be extensive westernmost areas.** Risk Lleyn peninsula to western slopes of Snowdon of cloud frequently above 450 to 650m. Elsewhere, the hills extensively cloud free, although patches here and there on higher slopes.
Chance of cloud free summits?	**80%**
Sunshine? Air clarity (below cloud)	Sunshine, most extensive. Hazy westernmost areas; otherwise visibility very good after fog some valleys morning.
How Cold? (at 900m)	0C tending to rise to 2C. Will feel as cold as minus 8C directly in the wind.
Freezing Level	700m rising toward or above highest summits. Frost valleys morning.

Eryri / Snowdonia National Park - Looking Ahead

	Sunday 15 November	Monday 16 November
How windy? (On the summits)	Still considerable uncertainty: Possible lull between southerly 20-30mph and later abruptly 30 to possibly 50mph.	Westerly; dropping from 25-35mph at dawn to 10-20mph by dusk. Windiest more northern hills.
Effect of wind on you?	**Temporarily small, but zones where wind chill significant and walking difficult - these challenging conditions could set in abruptly.**	**Considerable wind chill and buffeting in gusty winds, mainly higher slopes in morning.**
How wet? (Precipitation and its impact)	**Periods of rain** Areas of rain will circulate within general low pressure, abruptly falling as snow on higher areas late in day.	**Snow/hail showers** Squally snow and hail showers, mainly morning. Rain below 350m.
Cloud on the hills?	**Fog very likely across the mountains all day** Fog in some areas from lower slopes up, and few breaks above 600m. There may be an improvement as most cloud rises to above 750m.	**Extensive higher areas, particularly west** Fog frequent, in morning rarely clearing above 750m, though may break off Berwyn mountains. By afternoon, cloud intermittently clearing all but perhaps highest summits (above 1000m). Near showers, plumes of cloud below
Chance of cloud free summits?	**20%**	**50%**
Sunshine? Air clarity (below cloud)	Sunshine occasionally, most likely afternoon. Regions of very poor visibility - but often very good later in day.	Intermittent sunshine; most sun mid Wales. Poor visibility in snow, but otherwise very good.
How Cold? (at 900m)	3 to 5C, may abruptly drop toward 0C	-2C. Will feel as cold as minus 12C directly in the wind.
Freezing Level	Above the summits. But threat change to freezing level of 950m later in day.	650m.

Planning Outlook

All mountain areas of Britain from Sunday, 15 November, 2026

On Sunday, uncertainty in forecast detail remains within a complicated area of low pressure.
Beyond, cold with higher terrain frequently or almost permanently frozen most or perhaps all next week. Wales, and perhaps N England, will see one or two incursions of much warmer air together with areas of persistent rain and snow. Some higher areas may have a considerable snow. Overall, low precipitation across Scotland, but marked exceptions: here too, where the frequently northerly wind rises over mountains (with the sea directly to the north), accumulations of snow may well be considerable.

Forecast issued at 14:12 on Friday, 13 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
