General Summary for Sunday, 15 November, 2026

British Mountain Summary:
Based on forecast chart for noon 15 November, 2026

Rain and increasingly snow over Scottish mountains as colder air moves in. Drier and higher cloud bases toward southwest Highlands. Rain affects northern England and Wales with some persistent and locally heavier falls, becoming snow on hills into evening. Wind speed and direction will vary in all areas.

Headline for Eryri / Snowdonia National Park

Frequent or persistent rain, sleet tops, low cloud; windy later.

Detailed Forecast for Sunday, 15 November, 2026

How windy? (On the summits)	South-southwesterly or variable, 20-25mph up to dawn, but soon 15mph or often less onward into early afternoon, but then switching northwesterly and rapid rise to 35-40mph up to dusk or soon after dark.
Effect of wind on you?	**Mostly small until into afternoon, then worsening quickly and sudden buffeting gusts develop, challenging walking soon after sunset and significant wind chill.**
How wet? (Precipitation and its impact)	**Often raining, heavier at times; sleet tops** Rain fairly widely all day, sometimes patchy and light, but steadier heavier falls for periods, particularly western areas, setting in most prolonged likely in afternoon. Some sleet or wet snow may fall on higher tops in heavier moments. A few showers into evening with snow down to 500m.
Cloud on the hills?	**Extensive** Shrouding the mountains most likely all day, fairly persistent to mid-elevations in the west, but some variable breaks toward Carneddau and east Wales for periods. Blanket cloud likely afternoon. Lifting bases only after dark.
Chance of cloud free summits?	**20%**
Sunshine? Air clarity (below cloud)	Overcast and dull or murky. Often poor visibility most hills.
How Cold? (at 900m)	3 to 5C, little change until evening, then dropping after dark to -1C. By late afternoon onward, feeling like -7C in the wind, or -12C after dark.
Freezing Level	Above the summits until dusk, then dropping rapidly into evening to 800m, or nearer 600m onward into night.

Eryri / Snowdonia National Park - Looking Ahead

	Monday 16 November	Tuesday 17 November
How windy? (On the summits)	NW'ly 20mph at dawn, soon 10mph or less for a few hours. Into afternoon, rising SE'ly 20-30mph, rapidly 50-60mph after	Southwesterly 25 to 35mph, some uncertainty of highest speed, chance of more sustained gales occurring.
Effect of wind on you?	**Small until well into afternoon, but later starting to worsen with marked wind chill. Deteriorating significantly into evening.**	**Blustery over high terrain affecting comfortable walking and balance with considerable wind chill. May worsen.**
How wet? (Precipitation and its impact)	**Early showers fade; snow/rain by evening** Frequent showers from overnight through dawn, snow and hail falling toward lower elevations briefly. Showers fade to be largely dry middle of day-afternoon. After dark, hill snow and rain moves in from south, all rain into night.	**Frequent or persistent heavy rain** Often raining western mountains, heavy bursts sometimes with hail mixed in, chance of isolated thunder. Pulses of rain spreading well inland frequently, but patchier toward east Wales.
Cloud on the hills?	**Mostly clearing** Varying cloud capping higher slopes in the morning, mostly northern areas, but lifting and breaking up to leave most hills clear. After dark, as precipitation develops, cloud increasingly enveloping higher terrain.	**Frequently covering tops** Cloud base varying, but often shrouding higher and western hills above 700m, at times patches to 400m near to west coast. Better breaks higher up from Carneddau to Bala and Berwyn groups.
Chance of cloud free summits?	**60% rising to 90%**	**30%**
Sunshine? Air clarity (below cloud)	Patchy sun and cloud at first in north; then sunshine fairly weak due to high cloud, which likely thickens further later. Visibility excellent.	Little if any sun. Visibility at times good where dry, but often poor in rain in west.
How Cold? (at 900m)	-2C, later 0C, then +5C into night. As wind increases later, feeling like -10C, or colder after sunset.	4C, little change all day. Feeling like -5C or possibly near -10C if exposed to stronger wind.
Freezing Level	600-700m, then rising a little during afternoon, varying in evening, but eventually lifting above the tops into night.	Above the summits.

Planning Outlook

All mountain areas of Britain from Monday, 16 November, 2026

Cold with higher terrain frequently or almost permanently frozen most or all next week particularly in Scotland. Meanwhile Wales and northern England will see one or two incursions of much warmer air together with areas of persistent rain and intermittent hill snow. Less precipitation generally northward across Scotland, but marked exceptions: here too, where the frequently northerly wind rises over mountains (with the sea directly to the north), accumulations of snow may well be considerable.

Forecast issued at 16:00 on Saturday, 14 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
