General Summary for Sunday, 22 November, 2026

British Mountain Summary:
Based on forecast chart for noon 22 November, 2026

Windy across upland Britain, gales some higher areas, particularly Snowdonia. Extensively dry and cold and much terrain will be at least partially frozen. However, cloud progressively thicker southward across Wales, with an almost stationary area of rain South Wales.

Headline for Eryri / Snowdonia National Park

Upland wind near gale. Chance rain mid Wales.

Detailed Forecast for Sunday, 22 November, 2026

How windy? (On the summits)	Easterly 35 to 45mph, locally 50 or 55mph. Very gusty in some areas, sometimes powerful gusts penetrating to lower slopes, particularly coastal slopes.
Effect of wind on you?	**Considerable wind chill and sometimes abruptly gusty winds will make walking and particularly balance difficult; sometimes on lower slopes.**
How wet? (Precipitation and its impact)	**Extensively dry, but rain may reach mid Wales** Rain in South Wales may intermittently reach Pumlumon area, possibly Cader Idris. Sleet or snow highest tops. Total rainfall small.
Cloud on the hills?	**Mostly very little** Most or all mountains free of cloud. However, in east Wales, and also in rain, cloud forming for periods - particularly morning - above 450m.
Chance of cloud free summits?	**30% east to 80% west**
Sunshine? Air clarity (below cloud)	High level cloud sheet likely to restrict the sun to patches here and there, mainly NE Wales. Hazy.
How Cold? (at 900m)	2C. Will feel as cold as minus 10C directly in the wind.
Freezing Level	Above the summits, but terrain frozen or partly frozen lower slopes, particularly morning.

Eryri / Snowdonia National Park - Looking Ahead

	Monday 23 November	Tuesday 24 November
How windy? (On the summits)	Southeasterly 20 to 30mph, strongest west Wales.	South to southeasterly, strengthening quickly with height a very gusty 45-65mph. Ferocious gusts; some reaching valleys.
Effect of wind on you?	**Fairly small, particularly east Wales, but higher up marked wind chill and significant buffeting elsewhere.**	**Severe wind chill and very difficult walking where exposed. Gusts may well knock you over - even on some lower slopes.**
How wet? (Precipitation and its impact)	**Risk rain spreading inland** A band of rain will probably approach from west only later in day, but small risk rain setting in west Wales by midday and then across remaining areas.	**Precipitation most or all day** A broad area of more or less constant snow, turning to rain, will extend eastwards, probably during morning, perhaps before dawn.
Cloud on the hills?	**Probably very little. Likely to become extensive in rain** Most likely no more than patches above 700m. However, should rain envelop the region, then fog likely to become very extensive.	**Very extensive.** Cloud base extensively 300-500m, but mostly 600n Snowdon range.
Chance of cloud free summits?	**70%**	**20%**
Sunshine? Air clarity (below cloud)	Periods of sunshine but may turn cloudy or dull from west. Hazy, particularly east Wales.	Sunshine unlikely. Widely misty or murky and appalling visibility in snow.
How Cold? (at 900m)	1C. Will feel as cold as minus 8C in the wind.	Varied: -1 to 2C, tending to rise from west. Will feel as cold as minus 14C in the wind.
Freezing Level	Close to freezing point on highest summits.	600m at first, but tending to rise above the summits from the west.

Planning Outlook

All mountain areas of Britain from Monday, 23 November, 2026

Colder than normal most mountain areas throughout next week. Precipitation and temporarily warmer conditions will occasionally penetrate across most southern and western mountains, but particularly later in the week, freezing level across Britain may drop to a few hundred metres - with much higher terrain persistently frozen. Most considerable snowfall is likely over the SE Highlands and perhaps Scottish Border hills.

Forecast issued at 12:20 on Saturday, 21 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
