General Summary for Monday, 6 May, 2024

British Mountain Summary:

Based on forecast chart for noon 6 May, 2024

Central, east and southern Scotland sees areas of rain from early in the day - these then redeveloping into local thundery downpours into afternoon. For England and Wales, scattered heavy and locally thundery showers also forming later. Winds fairly light overall. Varied cloud bases, limited sun.

Headline for Southeastern Highlands

Rain sometimes heavy, local thunderstorms afternoon. Light winds.

Detailed Forecast for Monday, 6 May, 2024

How windy? (On the Munros)	Light and variable, 5 to 10mph or at times calm. Risk local sudden gusts of 25mph around heavy showers.
Effect of wind on you?	Mostly small
How wet? (Precipitation and its impact)	Rain and drizzle, heavy bursts, local thunderstorms afternoon. Remnants of previous thundery rain continuing overnight through to dawn with local bursts of rain, pockets of drizzly rain for a few hours. Into afternoon, slow-moving downpours, local thunderstorms forming. Areas of persistent rain onward into evening.
Cloud on the hills?	Extensive, some local breaks Low cloud fairly widespread from dawn with varied banks from lower slopes upward. Slow rise in base, will allow some breaks, but these filling in again in the downpours.
Chance of cloud free Munros?	30% rising to 60%
Sunshine? Air clarity (below cloud)	Mostly overcast with rare glimpses of sun. Hazy, with rather murky conditions, visibility may improve to become good at times, but poor in rain.
How Cold? (at 900m)	6 to 8C, then dropping slightly into the night, locally 4C.
Freezing Level	Above the summits

Southeastern Highlands - Looking Ahead

	Tuesday 7 May	Wednesday 8 May
How windy? (On the Munros)	Variable 5-10mph or less.	South to southwesterly 15 to 20mph, may start to strengthen with time.
Effect of wind on you?	Mostly small	Fairly small
How wet? (Precipitation and its impact)	Drizzle fades, risk showers afternoon Patchy drizzly rain in the morning, tending to fade out. One or two showers forming into the afternoon, risk locally heavy.	Rain unlikely
Cloud on the hills?	Lifting with increasing breaks Banks of cloud at various heights in the morning, patchy fog in some glens. Will lift toward higher slopes with some breaks forming toward tops, best later in day.	Many tops clearing Banks of cloud around some slopes in the morning, plus local mist some glens at first. Lifting toward higher tops with breaks forming to most summits.
Chance of cloud free Munros?	50%	70%
Sunshine? Air clarity (below cloud)	Mostly cloudy, glimpses of sun. Misty early in the day, visibility becoming good.	Patchwork of sun, some high cloud may build from west. Visibility very good.
How Cold? (at 900m)	4 to 6C.	4 to 7C. Feeling near freezing on tops in increasing wind.
Freezing Level	Above the summits	Above the summits

Planning Outlook**All mountain areas of Britain from Tuesday, 7 May, 2024**

High pressure builds from the west to be centred over England and Wales into midweek. A fair amount of dry weather in the outlook which may well last through next weekend. Isolated afternoon showers some days. Some weak fronts drifting in from the Atlantic on southwesterly winds bring a risk of occasional rain to the West and Northwest Highlands, with mountains covered in cloud for periods here, especially near to coasts in west. Often dry with higher cloud bases toward the central and eastern Highlands. Briefly cooler in northern Scotland early in the week, but mostly fairly warm and winds often light.

Forecast issued at 16:10 on Sunday, 5 May, 2024

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.
