General Summary for Sunday, 1 June, 2025

British Mountain Summary:

Based on forecast chart for noon 1 June, 2025

Low pressure brings a cold and blustery westerly airflow. Area of rain southern Highlands southwards, will clear in morning, brighter conditions following. Showers transferring inland from west coast, concentrated NW Highlands and later NE Scotland, where risk of thunder. Turning mostly dry later in the day for England and Wales.

Headline for Southeastern Highlands

Early rain and hill fog. Improving, before heavy showers return later, risk thunder.

Detailed Forecast for Sunday, 1 June, 2025

How windy? (On the Munros)	Southwesterly 20-25mph morning, then westerly 30-35mph. Strongest Central Belt and in and around showery trough as it moves in later, up to 40mph.
Effect of wind on you?	Comfort of walking affected at times. May become arduous and very gusty as trough moves in later in day. Significant wind chill as the winds strengthen.
How wet? (Precipitation and its impact)	Band of heavy showers mid to late afternoon A batch of heavy rain, northward extent uncertain, will soon clear early morning. Then mostly dry for a few hours, until a trough moves in after lunchtime, with clouds bubbling up as clusters of perhaps thundery showers move in from west. Greatest risk of thunder, east of Glenshee over to the Angus hills late afternoon.
Cloud on the hills?	Extensive early on, and reforming upper slopes in afternoon showers. Extensive cloud to start the morning, banks down to lower slopes in places. Will lift and break as morning progresses and into early afternoon, with breaks developing. Will re-form on higher ground above 900m as showery trough moves in later in afternoon.
Chance of cloud free Munros?	Lifting to 60% for a time middle of day, before lowering again.
Sunshine? Air clarity (below cloud)	Patchy sunshine developing for a few hours, particularly on lower slopes. Excellent visibility for several hours, but becoming poor in heavy downpours that develop later.
How Cold? (at 900m)	5C. Feeling as cold as -6C in the afternoon wind.
Freezing Level	Above the summits.

All mountain areas of Britain from Monday, 2 June, 2025

Atlantic low pressure systems will continue to dominate and bring a sustained period of westerly winds for the next 7 to 10 days. High rainfall western mountains, with periods of strong to gale force westerly winds bringing significant chill factor. Best of the drier and brighter weather for eastern ranges. Freezing level at times down to 1200-1400m in Scotland, bringing occasional snow to the highest Munro tops.
