General Summary for Tuesday, 1 July, 2025

British Mountain Summary:

Based on forecast chart for noon 1 July, 2025

Cooler for Scotland and northern England. Patchy rain and low cloud across central-southern Scotland and northern England, risk of developing into slow-moving heavy downpours into the afternoon. Low cloud and a little rain for Wales. West & northwest Scotland better, cloud lifting to give sunshine near the coast. Mostly light winds.

Headline for Southeastern Highlands

Areas of rain, low cloud; heavy bursts, risk thunder later. Light wind.

Detailed Forecast for Tuesday, 1 July, 2025

How windy? (On the Munros)	Direction variable, mostly northeast turning southeasterly, 10mph or less; sudden gusts during and just before downpours locally.
Effect of wind on you?	Small
How wet? (Precipitation and its impact)	Patchy rain; increasing risk local heavy bursts; possible thunder Remnants of overnight rain leaves pockets of rain which may linger, some heavier bursts, drifting westwards. Into afternoon, localised slow-moving heavy showers forming, an isolated thundery burst - greater risk toward the central highlands toward evening.
Cloud on the hills?	Fairly extensive, some breaks where dry Risk cloud extensive across many hills in morning, patchier westwards. Lifting to upper slopes, but may persist all day. Some breaks to tops further west, but where showers occur, lowering over tops, patches in places forming to lower slopes during/after rain.
Chance of cloud free Munros?	30% rising to 60% west, dropping again by evening.
Sunshine? Air clarity (below cloud)	Some sun breaking through in morning, most likely toward west; cloud bubbling up afternoon, may fill in. May start misty some areas, visibility becoming excellent below cloud.
How Cold? (at 900m)	7C rising to 10C.
Freezing Level	Above the summits

Southeastern Highlands - Looking Ahead

	Wednesday 2 July	Thursday 3 July
How windy? (On the Munros)	Westerly 10 to 15mph or less.	Southwesterly 20 to 30mph.
Effect of wind on you?	Small	Starting to affect comfortable walking over higher terrain. Feeling rather cool.
How wet? (Precipitation and its impact)	Local heavy showers mainly later Remnants of showers from overnight may leave patches of rain at first. Scattered showers forming mainly mid-late afternoon onward, local heavy bursts, greatest risk eastern areas toward evening, isolated thunder.	Occasional rain mostly west A little rain mostly central highlands, brief showers mixed in, risk more frequent with time.
Cloud on the hills?	Mostly clear, patches in showers Patchy cloud around upper slopes in the morning, lifting above the tops. If showers form, cloud banks forming over tops, local patches lower down.	Mostly higher western tops Patches confined to higher tops, often clear toward east. May drop slightly to cap upper slopes more often central highlands.
Chance of cloud free Munros?	80%	70%
Sunshine? Air clarity (below cloud)	Patchwork of sun and cloud, may build and fill in afternoon. Visibility excellent.	Often cloudy, glimpses of sun east. Visibility very good, reducing where rain occurs.
How Cold? (at 900m)	7 to 10C.	7 or 8C, marginal rise during day.
Freezing Level	Above the summits	Above the summits

Planning Outlook

All mountain areas of Britain from Wednesday, 2 July, 2025

Fresher westerly air into midweek. Some heavy showers forming, mostly in eastern Scotland and Pennine areas - with light winds some slow-moving heavy downpours, possible thunder locally. By Thursday, west to southwesterly winds increase for Scotland, with more persistent rain and low cloud returning from the west associated with fronts over the Atlantic. Friday brings a risk of heavier rain to western Scotland and gales over higher terrain for Scotland and possibly northern England, rain extending further south with time. The weekend looks unsettled with low pressure bringing heavy showery rain widely, risk isolated thunder.

Forecast issued at 16:07 on Monday, 30 June, 2025
