General Summary for Saturday, 5 July, 2025

British Mountain Summary:

Based on forecast chart for noon 5 July, 2025

Extensive cloud and frequent rain from central Highlands westward, northwest as well; east Scotland may see some improvement later. Mild but feeling cool in the breeze. Drizzly rain much of the day across Lakeland and west Wales, likely more patchy over the Pennines and gradually improving, though risk of showers later N England.

Headline for Southeastern Highlands

Drizzly rain and fog west, best of breaks east; blustery, notably early

Detailed Forecast for Saturday, 5 July, 2025

How windy? (On the Munros)	At dawn, westerly 40mph, possibly stronger winds around Callander. Easing through morning and settling near 25-30mph, strongest winds always south.
Effect of wind on you?	Blustery over the mountains, affecting ease of walking on exposed ridges; expect balance challenges early in the day. Feeling cool.
How wet? (Precipitation and its impact)	Drizzly rain central highlands, occasionally drifting east A little patchy rain in the morning with drizzle on high slopes, largely isolating to drizzly rain on high ground of central highlands. A few spots of drizzly rain may drift eastward at times.
Cloud on the hills?	Fairly extensive higher areas, breaks to tops far east hills Covering higher mountains most or all day, cloud base lowest in rain toward west, 800 to 1000m with variable lower patches. Some higher breaks east, tops around Glenshee at times exposed.
Chance of cloud free Munros?	10% west, 40% east
Sunshine? Air clarity (below cloud)	Largely overcast, a few glimpses of sun possible on easternmost slopes. Visibility often very good, though poor in rain.
How Cold? (at 900m)	8 or 9C most of the day, locally rising to 10C around Glenshee. Feeling near/below freezing in direct wind.
Freezing Level	Above the summits

Southeastern Highlands - Looking Ahead

	Sunday 6 July	Monday 7 July
How windy? (On the Munros) Effect of wind on you?	Northwesterly 20-25mph. Risk increasing later in the day around Glenshee, 30-35mph. Walking impeded at times, increasingly in the east - strongest winds may challenge balance. Feeling cool.	Northwesterly 25-35mph early, risk stronger east of A9. Then 25mph most of the day. Notable gusts over high tops. Often buffeting gusts over high terrain and downslope, may challenge stability at times. Feeling cool.
How wet? (Precipitation and its impact)	Showery rain on and off, easing Showery rain on and off, risk more frequent for a time with heavy bursts. Easing somewhat later in the day.	Substantially dry A few odd showers may drift onto northernmost hills east of the A9. Otherwise dry.
Cloud on the hills? Chance of cloud free Munros?	Patchy on high terrain, increasingly broken Patchy cloud often above 800-900m, nearer 900-1000m around Loch Tay with breaks to tops here. Generally breaking and lifting to clear many tops, most often clear around A9 and westward - may fill in at times around rain. 30%, rising to 70% A9 and west	Summits increasingly cloud-free Some cloud caps over high tops in the morning, lifting and breaking for largely cloud-free summits. Soon 90%
Sunshine? Air clarity (below cloud)	Little or no sun, only glimpses later. Excellent visibility.	Patchy sun gradually becoming fairly extensive, some fair weather cloud around. Excellent visibility.
How Cold? (at 900m) Freezing Level	8C in the morning, rising to 10 or 11C. Feeling near freezing in wind. Above the summits	6C rising to 11 or 12C. Loch Tay/Callander areas a degree warmer. Feeling like 3C in the wind. Above the summits

Planning Outlook

All mountain areas of Britain from Sunday, 6 July, 2025

A settling trend begins later Sunday as high pressure begins building from the southwest. High pressure will become dominant across England and Wales Monday and Tuesday, keeping weather substantially dry with increasing chance of sunny spells. In Scotland, low pressure to the north will facilitate a consistent westerly through much of the week, driving several weak fronts onto northwestern coasts - often cloudy here with periods of rain, tending to be drier with sunny spells in east Scotland. Temperatures will be near average. Some uncertainty about next weekend - fronts are likely to continue drifting towards Scotland, though possibly interrupted by dry and warm air from the continent pushing north.

Forecast issued at 15:52 on Friday, 4 July, 2025
