### General Summary for Friday, 25 July, 2025

#### British Mountain Summary:

#### Based on forecast chart for noon 25 July, 2025

Cloud and patchy rain in western Scotland clears east, progressively easing; far east Scotland substantially dry and clear. Patchy cloud over high English and Welsh summits in the morning, deteriorating with the arrival of patchy rain through afternoon. East Wales and south Pennines substantially dry and free of cloud.

#### Headline for Southeastern Highlands

High fog through early afternoon with some rain; improving

### Detailed Forecast for Friday, 25 July, 2025

<b>How windy? (On the Munros)</b>	Southwesterly 15 to 20mph; at times rising to 25mph higher tops near Ochills/Callander. Tending to shift westerly as the day goes.
<b>Effect of wind on you?</b>	Fairly small, may start to affect comfortable walking on exposed tops. Feeling cool on higher terrain.
<b>How wet?</b> (Precipitation and its impact)	<b>Patchy afternoon rain, mostly west</b> Patchy light rain arrives in the central highlands around midday. Tending to move east through afternoon though weakening as it goes; very little will reach east of the A9.
<b>Cloud on the hills?</b>	<b>Mostly higher tops, briefly more extensive; well breaking later</b> Cloud most extensive in central highlands in the morning, bases 700-900m for a time, scattered banks at these heights drifting east. Gradually rising to upper slopes and breaks forming toward tops afternoon, well broken off tops east of the A9.
<b>Chance of cloud free Munros?</b>	<b>30% rising to 60%, 80% east of A9</b>
<b>Sunshine?</b> Air clarity (below cloud)	Glimpses of sun increasingly breaking through during afternoon. Visibility increasingly very good.
<b>How Cold? (at 900m)</b>	10 or 11C, rising slightly on mountains east of A9. Little change if any towards central highlands. Feeling near freezing in the wind on higher tops.
<b>Freezing Level</b>	Above the summits
