General Summary for Friday, 8 August, 2025

British Mountain Summary:

Based on forecast chart for noon 8 August, 2025

Gale-force winds persist over higher terrain in Scotland. Rain and drizzle throughout the day toward the northwest, low cloud covering western mountains extensively; higher cloud bases eastwards. Cloud banks common on hills near the Irish Sea, clearer with more sun eastwards over England & Wales.

Headline for Southeastern Highlands

Upland gales. A little rain morning, cloud base rising east.

Detailed Forecast for Friday, 8 August, 2025

How windy? (On the Munros)	Southwesterly 40 to 50mph, some stronger gusts over high tops. Speeds tending to increase further into night, to 60mph on tops.
Effect of wind on you?	Walking arduous over higher terrain, forward progress challenging in places, often knocking you off balance where exposed on tops. Significant wind chill.
How wet? (Precipitation and its impact)	Patchy rain and drizzle mostly west Spots of drizzly rain occasionally drift over hills west of A9, locally more persistent in morning; amounting to little further eastwards, fading out into the afternoon.
Cloud on the hills?	Tending to rise, best of high breaks east Fairly extensive above 600-800m west of A9 from dawn, mostly above 900m to the east. Bases lifting, some breaks above tops east of the A9. Some tops towards central Highlands may clear, but banks likely to come and go over tops all day.
Chance of cloud free Munros?	20% rising to 50% east
Sunshine? Air clarity (below cloud)	Glimpses of sun most frequent east, more widely afternoon. Very good visibility below cloud in east, reduced for periods around rain in west.
How Cold? (at 900m)	8C rising to 10C eastern areas. Feeling like -3C in the wind.
Freezing Level	Above the summits

All mountain areas of Britain from Saturday, 9 August, 2025

A mixed southwesterly weather pattern prevails. Often windy, especially Scotland. Fronts coming in from the Atlantic bringing periods of rain most frequently in west and northwest Scotland. Small amounts of rain reaching eastern Scotland, more often dry. Patchier and less frequent rain for western England and Wales - higher pressure building for periods to give drier and warmer weather here. Low cloud often shrouding western tops, sometimes to lower elevations near coasts, higher cloud bases eastwards with better breaks.
