General Summary for Wednesday, 20 August, 2025

British Mountain Summary:

Based on forecast chart for noon 20 August, 2025

High pressure to northwest, north-easterly winds; gustiest England and Wales. Cloud sheet fairly extensive from dawn, breaking up through day to sunshine, but patches persisting for the northern Highlands, into eastern Border Hills, and Pennines. Best sun in the west, aside from slow-moving cloudy zone of western Argyll.

Headline for Southeastern Highlands

Early low cloud tending to burn off to sunshine. Best central Highlands.

Detailed Forecast for Wednesday, 20 August, 2025

How windy? (On the Munros)	North-easterly or well inland becoming variable, 10-20mph, highest early in day easternmost munros.
Effect of wind on you?	Fairly small; light buffeting gusts will be common over eastern tops and elevated passes; feeling cool.
How wet? (Precipitation and its impact)	No rain expected
Cloud on the hills?	Hills clear or becoming clear. Slowest in the east. Patches of cloud above 700m east of the A9 from dawn, possibly more extensive east of Glenshee. Elsewhere, just ragged patches, and these clear conditions extending to most areas by afternoon.
Chance of cloud free Munros?	60% rising to 90%
Sunshine? Air clarity (below cloud)	A patchwork of cloud and sun, tending to become more frequently sunny, especially central highlands. Excellent visibility.
How Cold? (at 900m)	5C, rising to 10C or locally warmer central highlands. Less rise Loch Tay to Glenshee, minimal rise east of Glenshee.
Freezing Level	Above the summits, but some sheltered glens will have a chilly dawn with after a slight ground frost.

All mountain areas of Britain from Thursday, 21 August, 2025

High pressure dominates through this week, with initial north-easterly winds, easing out as the high builds overhead with lighter winds. With a cooler air-mass in place, widely chilly dawns, with a slight frost for some valleys and glens, especially in the Highlands. Banks of cloud coming and going on the hills, with periods of sunshine, generally best in the west. Wind and rain may edge off the Atlantic into next week, but much uncertainty in detail and timing of this change.
