General Summary for Friday, 29 August, 2025

British Mountain Summary:

Based on forecast chart for noon 29 August, 2025

Rain frequent or persistent for western Scotland most of the day, some slow-moving heavy bursts, these extending increasingly eastwards over the Highlands. Clusters of showery rain over western England and Wales will drift eastwards during the day on fresh and gusty winds.

Headline for Southeastern Highlands

Showers develop widely, risk thunder later. Wind fairly light.

Detailed Forecast for Friday, 29 August, 2025

How windy? (On the Munros)	Southerly 20mph, becoming lighter and variable for periods; later southwesterly.
Effect of wind on you?	Mostly small. Notable gusts around afternoon thundery showers.
How wet? (Precipitation and its impact)	Increasingly showery, risk thunder Patchy rain on and off through morning, drier in east. Showery bursts increasing into afternoon, risk of slow-moving downpours, local thunderstorms central Highlands, later drifting further across eastern areas.
Cloud on the hills?	Fairly extensive, may briefly improve Cloud fairly extensive over middle to high slopes much of the day, particularly near Callander and east towards A9; higher bases around Loch Rannoch. Some improvement for a time afternoon, though increasingly cloudy later in and after rain.
Chance of cloud free Munros?	20%
Sunshine? Air clarity (below cloud)	Little or no sunshine, best chance east of A9. Visibility often poor in cloud and rain, though may improve for a time.
How Cold? (at 900m)	8 or 9C, rising slightly east of A9.
Freezing Level	Above the summits

All mountain areas of Britain from Saturday, 30 August, 2025

An unsettled weekend ahead driven by low pressure to the west/north of Scotland. Brisk westerlies will drive showery rain onto western mountains, at times drifting eastwards. Some local thundery downpours may arise. Saturday in particular will be very windy with widespread risk of gales and heavy rain setting in from the southwest. Sunny periods will arise between weather features, greatest chance in eastern areas later in the weekend and early next week. Next week stays mixed with low pressure in charge, frequent rain or showers continuing. Some improvement later in the week as pressure tends to rise.
