General Summary for Monday, 24 November, 2025

British Mountain Summary:

Based on forecast chart for noon 24 November, 2025

Turning cold from north and extensively windy behind an area of low pressure centred over SE England. Snow and hail showers will affect N & E Scotland, whilst further south patchy rain (sleet highest summits), but total rainfall small.

Headline for Southeastern Highlands

Snow and hail showers, especially Angus; windy.

Detailed Forecast for Monday, 24 November, 2025

How windy? (On the Munros)	Northerly, 30 or 35mph west of the A9. Stronger further east, particularly near and east of Glenshee where 40, perhaps 45mph
Effect of wind on you?	Walking arduous, sometimes difficult, particularly near precipitation, where in sudden gusts balance challenging.
How wet? (Precipitation and its impact)	Snow and hail showers - mainly Angus Succession of hail and above 400m snow showers Angus. Few showers (only flurries) elsewhere - very likely no precipitation near central belt.
Cloud on the hills?	Extensively covering higher tops Angus; may clear elsewhere Near and east of Glenshee: Cloud base varying as showers come and go: typically 600m, but shafts of cloud below 400m near precipitation. Elsewhere: Higher cloud base, breaks may reach 1200m.
Chance of cloud free Munros?	70% but 20% toward Angus
Sunshine? Air clarity (below cloud)	Patches of bright sunshine, particularly toward central belt. Little if any sun and frequent poor visibility Angus. Otherwise visibility very good or excellent.
How Cold? (at 900m)	-1C; dropping marginally through the day. Will feel as cold as minus 11C directly in the wind.
Freezing Level	1000m dropping from north to 800m. Risk slight frost some valleys after dawn.

Southeastern Highlands - Looking Ahead

	Tuesday 25 November	Wednesday 26 November
How windy? (On the Munros) Effect of wind on you?	Northerly 30 to perhaps 40mph, gradually easing to 15 to 20mph and toward dusk backing westerly. Considerable buffeting and wind chill after dawn, but will become small through afternoon.	Southerly soon 40 to 55mph. May veer more westerly late in day and may ease a little. Some easing through day, but extensively difficult walking where exposed with powerful gusts and considerable wind chill
How wet? (Precipitation and its impact)	Precipitation very unlikely	Rain; most frequent west of A9 Rain and drizzle spreading east morning (snow above 700m for a few hours). The rain off and on, most persistent central highlands, but little in total near and east of Glenshee and Ochils.
Cloud on the hills?	Varied; some higher tops clearing, most remaining in cloud. Generally, cloud base 900 to 1200m by late morning, the higher base toward and south of Loch Tay.	Becoming very extensive Some higher slopes initially cloud free. Will gradually deteriorate from as cloud forms above 450 to 600m although toward and east of Glenshee and Ochils; cloud base 600 to 800m.
Chance of cloud free Munros?	60% in afternoon	Soon dropping to less than 10%
Sunshine? Air clarity (below cloud)	Bright sunshine, most widely toward central belt. The air very clear so excellent visibility, but fog some valleys and higher slopes.	A little weak sun lower slopes near and east of Glenshee; otherwise soon extensively dull and misty.
How Cold? (at 900m) Freezing Level	-1C Around 750m, rising slowly through day. Some frozen ground lower slopes after frost in valleys.	-1C rising slowly to 3C. Will feel as cold as minus 14C directly in the wind. 750m morning; gradually transitioning to above the summits. Frost many valleys at dawn.

Planning Outlook**All mountain areas of Britain from Tuesday, 25 November, 2025**

As a series of deep Atlantic lows pass north of or across Britain, rainfall be become high particularly on western mountains together with frequent upland gales and low cloud. In Scotland, temperatures on the Munros will sometimes be below freezing point, but fresh snow transient, whereas elsewhere, snow rare, if any.

Forecast issued at 13:59 on Sunday, 23 November, 2025
