General Summary for Wednesday, 26 November, 2025

British Mountain Summary:

Based on forecast chart for noon 26 November, 2025

Scotland: Southerly gales with hill fog extend east to become very extensive with rain and drizzle; transient snow upper slopes.

England and Wales: Strengthening southerly winds with hills filling in with low cloud with patchy rain and drizzle.

Headline for Southeastern Highlands

Dry start, hills initially clear, before hill fog moves in with patchy rain and snow. Gales for a time.

Detailed Forecast for Wednesday, 26 November, 2025

How windy? (On the Munros)	Southerly soon 40 to 55mph. May veer more westerly late in day and may ease a little.
Effect of wind on you?	Some easing through afternoon, but extensively difficult walking where exposed with powerful gusts and considerable wind chill
How wet? (Precipitation and its impact)	Rain; most frequent west of A9 Rain and drizzle spreading east morning (snow above 700m for a few hours). The rain off and on, most persistent central highlands, but little in total near and east of Glenshee and Ochils.
Cloud on the hills?	Becoming very extensive Some higher slopes initially cloud free, especially easternmost hills. Will gradually deteriorate from west as cloud forms above 450 to 600m although toward and east of Glenshee and Ochils; cloud base 600 to 800m.
Chance of cloud free Munros?	60% at first, dropping to less than 10%
Sunshine? Air clarity (below cloud)	Pockets of weak sun lower slopes near and east of Glenshee; otherwise soon extensively dull and misty.
How Cold? (at 900m)	-1C rising to 3C through daylight. Will feel as cold as minus 14C directly in the wind.
Freezing Level	750m morning; gradually transitioning to above the summits. Frost into glens at dawn.

	Thursday 27 November	Friday 28 November
How windy? (On the Munros) Effect of wind on you?	South to southwesterly, strengthening through day, & quickly with height to widely 55mph where exposed on higher Severe wind chill and walking difficult. Where exposed on higher areas, generally mobility a struggle.	Southwesterly 50 to 70mph. Winds at peak strength early in the morning across northern hills. Extensively difficult or very difficult conditions with severe wind chill and buffeting. Strong gusts into glens.
How wet? (Precipitation and its impact)	Frequent or constant rain Rain and drizzle most or all day. Least rain near Angus and Ochils.	Showers increasingly, snow upper slopes. Showers increasingly moving in. Most widely to hills west of the A9. Snow above 700m or so. Few reaching hills east of Glenshee.
Cloud on the hills?	Mountains persistently foggy. Persistent cloud from 200 to 500m most mountains. Cloud base 600 to 900m near and east of Glenshee.	Covering upper slopes often Bases varying markedly, but extensively covering tops near and west of A9. More on and off tops elsewhere, down to 700-800m in showers.
Chance of cloud free Munros?	Almost nil	30%
Sunshine? Air clarity (below cloud)	Rare glimpses of weak sun lower slopes east of Glenshee. Visibility widely poor.	Occasional sun, perhaps frequent in east. Visibility ranging from very good, to poor or very poor in showers.
How Cold? (at 900m) Freezing Level	6C. Will feel as cold as minus 9C directly in the wind. Above the summits.	0 or -1C 800-900m

Planning Outlook

All mountain areas of Britain from Thursday, 27 November, 2025

A long series of Atlantic lows passing north of or across Britain will bring high rainfall to western mountains together with frequent upland gales (sometimes stormy) and low cloud. Temperatures on higher tops sometimes below freezing point, particularly at the weekend in Scotland, but elsewhere fresh snow transient.

Forecast issued at 15:06 on Tuesday, 25 November, 2025

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.
