General Summary for Thursday, 27 November, 2025

British Mountain Summary: Based on forecast chart for noon 27 November, 2025

Powerful south to south-westerly winds, bringing widespread upland gales with rain on and off, frequent or constant for western mountains, and persistent fog across the hills. Later a cold front will move in, clearing to squally showers Scotland around dusk.

Headline for Southeastern Highlands

Gales or severe gales with severe wind chill. Frequent rain and extensive hill fog.

Detailed Forecast for Thursday, 27 November, 2025

How windy? (On the Munros)	Southwesterly, strengthening through day, & quickly with height to widely 60mph where exposed on higher tops.		
Effect of wind on you?	Severe wind chill and walking difficult. Where exposed on higher areas, generally mobility a struggle.		
How wet? (Precipitation and its impact)	Frequent or constant rain Rain and drizzle most or all day. Least rain near Angus and Ochils.		
Cloud on the hills?	Mountains persistently foggy. Persistent cloud from 200 to 500m most mountains. Cloud base 600 to 900m near and east of Glenshee.		
Chance of cloud free Munros?	Almost nil		
Sunshine? Air clarity (below cloud)	Rare glimpses of weak sun lower slopes east of Glenshee. Visibility widely poor.		
How Cold? (at 900m)	6C. Will feel as cold as minus 9C directly in the wind.		
Freezing Level	Above the summits.		

MOUNTAIN WEATHER INFORMATION SERVICE

Southeastern Highlands - Looking Ahead

	Friday 28 November	Saturday 29 November
How windy? (On the Munros) Effect of wind on you?	Southwesterly 50 to 70mph. Winds at peak strength early in the morning across northern hills. Extensively difficult or very difficult conditions with severe wind chill and buffeting. Strong gusts into glens.	Low confidence in forecast: Most likely northerly, 15 to 25mph, may increase to 30 to 45mph through day. Be prepared for significant wind chill in the north wind and some buffeting. May become fairly arduous later.
How wet? (Precipitation and its impact)	Showers increasingly, snow upper slopes. Showers increasingly moving in. Most widely to hills west of the A9. Snow above 700m or so. Few reaching hills east of Glenshee.	Mostly dry Likely dry, bar isolated snow flurries in the north for a time. Small risk, should an area of low pressure track further north, of prolonged snow in the south for a time.
Cloud on the hills?	Covering upper slopes often Bases varying markedly, but extensively covering tops near and west of A9. More on and off tops elsewhere, down to 700-800m in showers.	Varying, mainly confined to tops. Cloud cover variable across area, but tending to come and go across higher tops in the north mostly. Low risk extensive in south later in any rain/snow.
Chance of cloud free Munros?	30%	
Sunshine? Air clarity (below cloud)	Occasional sun, perhaps frequent in east. Visibility ranging from very good, to poor or very poor in showers.	Variable cloud and occasional sun. Veil of cloud may edge up from south. Visibility mostly very good, but poor should rain/snow develop in south.
How Cold? (at 900m)	0 or -1C	Around -2C
Freezing Level	800-900m	Around 600m

Planning Outlook

All mountain areas of Britain from Friday, 28 November, 2025

Colder over the weekend again, but much uncertainty on the track of a small scale low on Saturday which would bring rain, upland snow and a core of strong winds for a time, most likely England and Wales. Sunday then mostly dry, bright and cold. Next week,. a long series of Atlantic lows passing north of or across Britain will bring high rainfall to western mountains together with frequent upland gales (sometimes stormy) and low cloud. Freeze-thaw cycles, with periods of fresh snow for Scottish hills especially.

Forecast issued at 13:07 on Wednesday, 26 November, 2025

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.
