General Summary for Sunday, 30 November, 2025

British Mountain Summary:

Based on forecast chart for noon 30 November, 2025

A fine day for many places, sunshine and broken cloud. Much terrain frozen in the Highlands, where a lull in wind, later strengthening southerlies in west. Strong northwesterlies for England and Wales tend to drop. Some local showers move inland from the Irish Sea. Deteriorating all areas into night.

Headline for Southeastern Highlands

Chilly wind eases; increases into night. Patchy cloud and sun.

Detailed Forecast for Sunday, 30 November, 2025

How windy? (On the Munros)	Northerly 15 to 25mph, strongest in east at dawn, dropping light and variable. Then from dusk starting to strengthen southerly, into night to 50mph.
Effect of wind on you?	Marked wind chill in exposure early in day, particularly in east, but becoming small. Deteriorating onward into night.
How wet? (Precipitation and its impact)	Rare if any flurries; snow/rain into night Fresh snow cover mainly eastern areas from overnight. Chance of an odd snow flurry areas near and east of Lochnagar early morning, fading out; otherwise dry. Onward into night, snow develops from west, but turning increasingly to rain higher up later in night, heaviest central highlands.
Cloud on the hills?	Some local cloud banks, mainly east Patchy cloud around some higher slopes and corries, mainly more eastern mountains, tending to thin and break. Some mist around corries or into glens central highlands.
Chance of cloud free Munros?	60%
Sunshine? Air clarity (below cloud)	Partly cloudy skies especially in east, some sunshine further south and west, then thin high cloud builds from west later. Visibility excellent away from cloud patches.
How Cold? (at 900m)	-2C, small variation with height. Rising onward into night. Feeling nearer -10C if exposed to wind early morning.
Freezing Level	Much terrain frozen with frost into glens, only partial thawing lowest sunlit slopes up to around 400-500m. Then into night starting to rise variably to upper slopes.

All mountain areas of Britain from Monday, 1 December, 2025

Areas of low pressure circulating to the west and north will dominate the weather pattern in the week ahead, bringing generally unsettled weather. Southwesterly air and briefly milder into Monday - prolonged heavy rain for England and Wales bringing renewed concern for flooding. Then typically cooler with showery conditions - higher mountains near or just below freezing point likely for the remainder of the week - some snow on tops, occasional hail. Wind speed likely to vary, some squally gusty spells, but also some lulls possible during the week.
