General Summary for Tuesday, 2 December, 2025

British Mountain Summary:

Based on forecast chart for noon 2 December, 2025

Hail showers will frequent west coast hills fairly widely; snow on the highest tops with risk of isolated lightning. Drier inland, particularly northeast Scotland where sunny bursts will occur. Chilly, feeling cold in a brisk southwesterly wind; this easing in Wales and south Pennines afternoon.

Headline for Southeastern Highlands

Strong wind; high terrain often in cloud

Detailed Forecast for Tuesday, 2 December, 2025

How windy? (On the Munros)	Southwesterly 30-40mph; stronger gusts over the highest tops may reach up to 45mph.
Effect of wind on you?	Strenuous walking all day, increasingly arduous in exposure where stronger gusts may require bracing to maintain stability. Significant wind chill.
How wet? (Precipitation and its impact)	Rare showers west Local brief showers mostly in the Callander area, with snow above 800m. Most hills substantially dry.
Cloud on the hills?	Fairly extensive, varied low cloud Often covering higher slopes, but some varied low cloud banks, on south-facing slopes to some lower elevations particularly in morning. Some breaks forming to 900m, mostly north of Loch Tay.
Chance of cloud free Munros?	20%
Sunshine? Air clarity (below cloud)	Little sunshine expected. Visibility very good below cloud.
How Cold? (at 900m)	0 or 1C. Wind chill feeling like -10 to -13C.
Freezing Level	900 to 1000m

All mountain areas of Britain from Wednesday, 3 December, 2025

Low pressure circulating to the west and north will dominate the weather for the next 7 to 10 days, bringing generally unsettled weather. A brief period of slack pressure on Thursday into Friday will ease winds for a time though patchy rain will linger in several areas. Strong southwesterly winds return over the weekend bringing cloud and rain to many mountains, most persistent on southwestern slopes. Several low pressure systems will continue crossing the British Isles through the week; often showery and cloudy in the west with broader bands of rain regularly passing east. Wind speed likely to vary though often quite strong with risk of gales coming and going. Brighter, drier periods will punctuate the unsettled weather next week but these likely short-lived.

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
