General Summary for Sunday, 7 December, 2025

British Mountain Summary: Based on forecast chart for noon 7 December, 2025

Patchy rain in western areas early, drier east though lots of cloud over summits; some clear tops central and south Pennines. Winds soon begin to strengthen widely, quickest in Wales and reaching gale force here afternoon. Rain also arrives from the west afternoon, spreading widely into evening.

Headline for Southeastern Highlands
Early patchy rain west, soon turning blustery, more rain later

Detailed Forecast for Sunday, 7 December, 2025

How windy? (On the Munros) Effect of wind on you?	Some uncertainty: Southeasterly 15 to 25mph, tending to increase with gusts reaching 35mph over high tops afternoon. Into evening, speed and direction become highly variable with stronger gusts but also a lull possible, deteriorating in the later hours. Fairly small in morning, likely becoming more blustery and gusty around higher mountains. Beware sudden changes in conditions soon after dark with a risk of stronger impacts.
How wet? (Precipitation and its impact)	Patchy rain west, spreading more widely into evening Patchy rain possible around Callander/Ochils in the morning, though dry for most, particularly east. During afternoon, light rain arrives from the southwest, spreading more widely by nightfall and becoming heavy west of A9.
Cloud on the hills? Chance of cloud free Munros?	Extensive Shrouding the mountains widely, with banks of cloud from low to mid elevations upward. A few higher breaks possible early in the east. Less than 10%
Sunshine? Air clarity (below cloud)	Generally cloudy and misty, poor visibility likely most hills.
How Cold? (at 900m) Freezing Level	3 or 4C, warmest over the Angus hills and small variation with height. Feeling like -5C or possibly colder if exposed to stronger wind. Above the summits during daylight, lowering to just touch the highest tops overnight.

All mountain areas of Britain from Monday, 8 December, 2025

Generally unsettled into the week with areas of low pressure moving in from the Atlantic on prevailing southwesterly winds. Temperatures relatively mild, higher tops in the Highlands intermittently just below freezing point; expect periods of thawing even up to these tops. Day-to-day weather detail will be uncertain even in short-range as complex systems develop - a series of frontal systems bringing spells of rain, at times more widespread and heavy - any snowfall mostly confined to highest tops in Scotland; also showers at times with hail mostly near western coasts. Wind speeds will also vary, often blustery with periods of gales or severe gales on tops, but local lulls too.

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service. 2025.
